Good Afternoon Allyce:

May 21, 2021, should be the date Factory complete the process to include the new manual on the BOM (Build of the Material process). They are working on the new manual to send it to me for approval.

I think I will have access to the new manual soon, but the two ECD we have in stock will be installed soon in our office to a GC that will be used by a customer in TX, so will provide de manual to them.

I have to ask you a question, as I commented on the inspection, we are in the process to move, we have been confirmed that we are moving to Fulton, MD (is a shame we are leaving TX) but we don't have the address confirmed yet. In the process, if we have ECD in stock, can we move the inventory to the new location and keep it until all the processes for changes in the Licenses have been completed?

Hope you can help me with the question and if need more information on the corrective action letter, just let me know.

Best Regards,

Lazaro Casanueva

Subject: Question on Reply to Notice of Violation 030-39024/2020-001

Mr. Casanueva,

I am reviewing your response to the Notice of Violation and I wanted to get clarification on two items:

- Your response provided that full compliance was achieved on May 21, 2021, when the Netherlands' RSO confirmed the changes. I wanted to confirm if that date (in the future) was correct or if you had possibly meant March 21, 2021?
- For ECDs you had in inventory prior to taking corrective actions, do you have access to the new manual to provide to end users when they are distributed?

Thank you!
