I am writing to you today regarding the report "NUREG-2243". I am a nurse and have been for many years. I am currently finishing my nurse practitioner degree. I am involved in public health efforts in my community.

Navajo uranium miners experienced significantly high mortality rates of lung cancer, tuberculosis and respiratory diseases. Individuals living near uranium mining sites continue to have disproportionately high rates of disease directly linked to uranium exposure, including kidney cancer, bladder cancer, and stomach cancer rates up to 500 times the national norm.

This is unacceptable. It is important to remember that uranium was mined and refined initially as part of a war effort in WWII- if we truly wish to celebrate those who make sacrifices for our nation, why are we not honoring those who provided uranium by ensuring they have access to clean land and water? Not only is it unjust, it tarnishes the name of our country.

Please take immediate action to prioritize uranium mine clean-ups and compensation for the families who have experienced illness or death due to uranium exposure.

Amy Landrum RN BSN CWOCN
