

Public Meeting between NRC & NEI
Migration to RG 1.200 Revision 3 for Existing Risk-Informed Applications
June 11, 2021

Shilp Vasavada, Chief (A), PRA Licensing Branch B
Division of Risk Assessment
Office of Nuclear Reactor Regulation

Ed Miller, Project Manager
Plant Licensing Branch II-1
Division of Operating Reactor Licensing
Office of Nuclear Reactor Regulation

Purpose: Discuss process for licensees to incorporate RG 1.200, Revision 3, in existing risk-informed applications that were originally approved using a previous revision.

Discussion

- When a risk-informed application is approved, the version of RG 1.200 used to support the application is incorporated into the plant licensing basis (either explicitly or implicitly)
- Changes to the licensing basis (such as using a different revision of RG 1.200) need to be evaluated for the need for prior NRC review and approval
- 10 CFR 50.59 provides criteria unless there is a more specific change control process in the code (e.g., 10 CFR 50.54(a), 10 CFR 50.55a, etc.)
- Licensees are responsible for performing this evaluation and the evaluation is subject to inspection
