General Comment

NRC-2021-0089-0001

For ease in funding, an agreeable circumstance is to generate a cloud bid in defining data analysis, the industry has been for the most part even within government departments a closed-door; to prevent information overreach. A formal offering to data submission and review may give the opportunity to alleviate single operation assumption, the credible jurisdiction is many Nuclear Energy Engineers work outside the government as current job transfer is at a minimum after government service. Be it that the preservation of Nuclear Integrity is most important, the cost load of holding all data in a vaulted manner constrains total acquisition to total evidence of operation and status. Reliance on only one measure has been shown to make the wrong cut in time, thus is the same if the private industry has been treated as a foreign observer. Part of the industry is reliant on the proven methods without a rebuttal for modernization, with the federal boards searching for monetary inquisitions. It is recommended to apply data transfer to private contractual observers, looking to help establish a mainframe of operational observance and data renewal qualification; giving those whose main resume is in the nuclear field an opportunity to find work within private benefactors without risk security clearance.
