Subject: U.S. Nuclear Regulatory Commission - Advanced Reactor Generic Environmental Impact Statement Scoping Summary Report
Attachments: ANR GEIS Scoping Sum Rpt ML20269A317.pdf

Follow Up Flag: Follow up
Flag Status: Flagged

Ms. Martin,

On April 30, 2020, the U.S. Nuclear Regulatory Commission (NRC) issued a Notice of Intent to Prepare an Advanced Nuclear Reactor Generic Environmental Impact Statement in the *Federal Register (FR)* (84 FR 62559). In accordance with Title 10 of the *Code of Federal Regulations* Part 51.26, the NRC conducted a scoping meeting to collect comments. The NRC staff also collected comments from the public via e-mail, standard mail, and regulations.gov.

The NRC staff reviewed the transcripts from the public meeting and all comments received during the public scoping period, and identified individual comments. The NRC received approximately 3200 comment correspondence and approximately 110 unique comments. The NRC appreciates and thanks you for providing comments on the scope of the ANR GEIS. You will find a summary of the comments received and the staff's responses in the attached Scoping Summary Report.

On September 21, 2020 the Commission directed the staff to codify the findings of the ANR GEIS. The staff is currently assessing the impacts of adding rulemaking to the ANR GEIS effort and developing a revised schedule. Information on the NRC's rulemaking activities can be found at <https://www.nrc.gov/reading-rm/doc-collections/rulemaking-ruleforum/active/RuleIndex.html>. Information on the ANR GEIS rulemaking will be added to this website in the near future.

Please direct any inquiries to Mr. Jack Cushing, Sr. Project Manager at 301-415-3835, or via email at Jack.Cushing@nrc.gov or to Ms. Laura Willingham, Project Manager at 301-415-0857, or via email at Laura.Willingham@nrc.gov.

Thank you,
Laura M. Willingham
Project Manager

A. The Advanced Nuclear Reactor GEIS Public Scoping Period

On November 15, 2019, the U.S. Nuclear Regulatory Commission (NRC) staff issued a *Federal Register* notice (FRN) (84 FR 62559-TN6470) announcing an exploratory process and soliciting comments to determine the possibility of developing a Generic Environmental Impact Statement for licensing advanced nuclear reactors (ANR GEIS). The exploratory process included two public meetings, a comprehensive public workshop attended by multiple stakeholders, and a site visit to the Idaho National Laboratory, a location that is being contemplated for advanced reactors. As part of the exploratory process, the staff considered its experience with previous NRC GEISs that support power reactor license renewals (NRC 2013-TN2654), in situ uranium recovery facilities (NRC 2009-TN2559), and decommissioning (NRC 2002-TN665). During the exploratory process, the staff gathered information to determine whether developing an ANR GEIS to analyze the environmental impacts of both construction and operation of advanced reactors would improve the stability, effectiveness, and efficiency of the review process. The results of the exploratory process were documented in information paper, SECY-20-0020 (NRC 2020-TN6493), "Results of Exploratory Process for Developing A Generic Environmental Impact Statement for the Construction and Operation of Advanced Nuclear Reactors". In SECY-20-0020, the staff concluded that there was sufficient information for the staff to complete an ANR GEIS for small-scale advanced reactors that have the potential to generate up to approximately 30 megawatts thermal (MWt) per reactor with a correspondingly small environmental footprint. The information paper also stated that the actual bounding thermal power level of the advanced reactor used in the ANR GEIS would be a topic for further engagement with external stakeholders during the scoping process for the ANR GEIS (NRC 2020-TN6493).

On April 30, 2020, the NRC issued an FRN informing the public of its intent to develop an ANR GEIS and to conduct a scoping process to gather information necessary to prepare an ANR GEIS for small-scale advanced nuclear reactors (85 FR 24040-TN6458). The NRC held a webinar on May 28, 2020 to receive comments from the public on the scope of the ANR GEIS (NRC 2020-TN6459).

The ANR GEIS scoping FRN stated that the NRC intended to develop a GEIS for advanced nuclear reactors that feature a small generating output and correspondingly small environmental footprint in order to streamline the environmental review process for future small-scale advanced reactor environmental reviews. Because small-scale advanced reactors are not specific to only one reactor design and could be sited anywhere in the United States that meets NRC siting requirements, the FRN also discussed how the NRC decided to pursue a technology-neutral approach using a plant parameter envelope (PPE). The PPE would consist of a table of bounding values or parameters for different reactor designs located on a site. In addition, a table of values representing the site parameter envelope (SPE) (e.g., size of site, quantity of water used, demographics) would be developed to describe the affected environment. The ANR GEIS would evaluate the impacts of a reactor that fits within the bounds of the PPE on a site that fits within the bounds of the SPE to determine the environmental impact.

An application that references the ANR GEIS would need to demonstrate that its project is bounded by the analysis in the ANR GEIS and that there is no significant new information that affects the evaluation. The application would also need to analyze the site-specific resource-

related issues not resolved generically in the ANR GEIS. If the project is bounded by the ANR GEIS and there is no significant new information, the NRC would incorporate by reference the ANR GEIS in a supplemental environmental impact statement (EIS) and no further analysis would be needed for an issue that was resolved generically.

At the time of scoping, the NRC staff considered a “small-scale” advanced reactor as one having the potential to generate up to approximately 30 MWt per unit with a correspondingly small environmental footprint. Based on the comments received during scoping, the staff is expanding the use of performance-based plant parameters and assumptions that would reduce the reliance on a specified power level. Most resource areas do not need the power level to evaluate the impacts on the resource. For example, when evaluating water use, a performance-based parameter would be used to evaluate the advanced reactor’s water use versus water availability and performance assumptions; assumptions such as the advanced reactor would receive the required water permits from other agencies. A future advanced nuclear reactor application for an NRC license does not need to meet the assumptions and parameters for all the resource areas in order to incorporate by reference the ANR GEIS. The application can reference the resource areas that bound their application and then evaluate the resources areas that are not bounded.

During scoping the staff received comments concerning the National Environmental Policy Act (NEPA) process, the PPE and SPE, hydrology, socioeconomic, environmental justice, historic and cultural resources, climate change, radiological health, uranium fuel cycle, accidents, transportation of spent fuel, need for power, general comments in support of the ANR GEIS or nuclear power, general comments in opposition to the ANR GEIS or nuclear power, and comments concerning issues outside the scope of the ANR GEIS. Some comments suggested that the ANR GEIS be codified in an NRC rulemaking, similar to the codification of the findings in the NRC’s License Renewal GEIS (NUREG-1437) (NRC 2013-TN2654). The Commission in SRM-20-0020, dated September 21, 2020, directed the staff to codify the results of the ANR GEIS (NRC 2020-TN6492).

The purpose of the scoping process is to help define the environmental issues to be discussed in an EIS. The NRC issues a scoping summary report to document the results of the scoping process, but if needed the appropriate NRC staff director may revise the determinations made during the scoping process, as appropriate, if substantial changes are made in the proposed action, or if significant new circumstances or information arise and bear on the proposed action or its impacts at any time prior to issuance of the draft EIS as stated in Title 10 of the *Code of Federal Regulations* (10 CFR) Part 51.29(c) (TN250). The scoping summary report does not make the final determinations on what will be a generic issue or a site-specific issue; that determination will be made in the ANR GEIS.

B. Public Comments and Responses

B.1 Comments Concerning the NEPA Process

B.1.1 Public Participation

Comment: A number of comments stressed the importance of and provided input on the public participation process associated with the ANR GEIS, including requests for early engagement of stakeholders and future outreach prior to publication of the draft ANR GEIS.

Comments: (1-3-3) (2-1) (3-5) (9-2) (9-14) (20-4) (94-2) (94-12)¹

Response: *The NRC agrees that public participation is critical to the NRC's NEPA process. The NRC staff strives to conduct effective, open, and transparent public engagement. The NRC is committed to ensuring that the public has robust and early opportunities for providing public input during the development of the ANR GEIS, consistent with Council on Environmental Quality (CEQ) NEPA requirements in 40 CFR 1506.6 (TN4877) and NRC scoping requirements in 10 CFR Part 51 (TN250).*

B.1.2 Additional Scoping

Comment: One comment requested that if the NRC broadens the scope of the GEIS to encompass reactors larger than 30 MWt, as requested by many stakeholders, additional opportunities for comment on this revised scope should be provided.

Comment: (90-7)

Response: *The NRC is evaluating the use of a broader technology-neutral, performance-based approach that would include any type of advanced reactor that fits within the bounds of the performance parameters and assumptions in the ANR GEIS. This approach would establish performance-based criteria based on the potential for adverse environmental impacts and would largely decouple the criteria from the power level and focus the analyses on impacts on resources. Therefore, a reactor of any size that meets the performance measures and assumptions for a specific resource area could use the ANR GEIS for that resource. This fact broadens the scope of the ANR GEIS to encompass analysis of certain environmental issues even for advanced reactors larger than 30 MWt. The public will have the opportunity to comment on this approach when the draft ANR GEIS is issued, consistent with the regulatory requirements in 10 CFR Part 51 (NRC 2020- TN250).*

B.1.3 Rulemaking

Comment: Some comments suggested that the ANR GEIS be codified in an NRC rulemaking, similar to the codification of the findings in the NRC's License Renewal GEIS (NUREG-1437) (NRC 2013-TN2654). One comment also requested that the ANR GEIS should eliminate the opportunity for contested adjudicatory hearings on NEPA review issues.

¹ Each comment correspondence submitted during the scoping period is reviewed and individual comments are numbered according to the commenter.

Comments: (1-8-1) (21-13) (3-15) (26-14)

Response: *The staff in SECY-20-0020, Results of Exploratory Process For Developing A Generic Environmental Impact Statement for the Construction and Operation of Advanced Nuclear Reactors (NRC 2020-TN6493) considered whether to conduct a rulemaking to codify the findings in the ANR GEIS and did not recommend rulemaking at that time. However, on September 21, 2020, the Commission directed the staff to conduct rulemaking for the ANR GEIS (NRC 2020- TN6492). Codifying the environmental findings in the ANR GEIS through a rulemaking would limit the potential issues that would be raised during the adjudicatory hearing process on advanced reactor applications.*

B.1.4 Advanced Reactor Definition

Comment: Certain comments requested clarification on the NRC's use of the term "advanced reactors."

Comments: (37-8) (91-2)

Response: *The NRC will clarify the term “advanced reactors” in the ANR GEIS. Its definition will be informed by the one set forth in the Nuclear Energy Innovation and Modernization Act (aka NEIMA) (TN6469), which defines an advanced reactor as “a nuclear fission or fusion reactor, including a prototype plant (as defined in Sections 50.2 [TN249] and 52.1 [TN251] of Title 10, Code of Federal Regulations (as in effect on the date of enactment of this Act)), with significant improvements compared to commercial nuclear reactors under construction as of the date of enactment of this Act, including improvements such as—*

- A. additional inherent safety features;*
- B. significantly lower levelized cost of electricity;*
- C. lower waste yields;*
- D. greater fuel utilization;*
- E. enhanced reliability;*
- F. increased proliferation resistance;*
- G. increased thermal efficiency; or*
- H. ability to integrate into electric and nonelectric applications.”*

B.1.5 Scope of Analysis

Comment: Many comments supported the development of the ANR GEIS and made suggestions about sources of information that would be relevant to the generic analysis, including the License Renewal GEIS (NUREG-1437) (NRC 2013-TN2654) and the Clinch River early site permit (ESP) EIS (NRC 2019-TN6136), relevant law, and regulations, including Title 41 of the Fixing America's Surface Transportation Act (FAST-41) (TN6392) and Executive Order (EO) 13807 (82 FR 40463-TN6393), "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure Projects," and CEQ NEPA regulation updates (85 FR 43304-TN6485). Some comments suggested that compliance with applicable Federal, State, or local permits would necessarily mean that impacts associated with a given plant design would be small. Other comments stated that generic analysis of impacts of

advanced reactors is not possible, based upon the NRC's limited experience in regulating such reactors.

Comments: (1-4-3) (1-9-2) (1-9-3) (3-9) (3-10) (3-11) (3-12) (3-13) (3-14) (5-2) (5-3) (5-5) (5-6) (8-1) (9-8) (9-10) (9-11) (15-4) (15-8) (21-3) (21-4) (21-7) (21-8) (21-10) (21-11) (26-3) (26-4) (26-8) (26-9) (26-10) (26-11) (26-12) (26-13) (35-4) (37-10) (37-14) (37-16) (37-17) (37-20) (39-5) (40-4) (48-1) (91-3) (93-1) (94-6) (94-11)

Response: *In developing the ANR GEIS, the NRC is leveraging the substantial information and analyses, as well as various best practices and lessons learned, which it has developed from the licensing NRC has completed to date. For example, the staff plans to incorporate by reference specific analyses from the License Renewal GEIS (NUREG-1437) (NRC 2013-TN2654) for operational impacts and from recent new reactor EISs, where appropriate. The NRC recognizes the impacts of renewing the license for an operating reactor that has essentially become part of the environmental baseline can be different from the impacts of operating a new reactor in a setting with no history of nuclear plant operation. As discussed in SECY-20-0020 (NRC 2020-TN6493), the NRC staff concluded that there is sufficient information about advanced reactor technologies to support development of an effective ANR GEIS for small-scale reactors but noted that the power level would be discussed during scoping. Based on the comments received during scoping, the staff is expanding the use of performance-based plant parameters and assumptions that would reduce the reliance on a specified power level. The staff has experience using this approach in other licensing actions, such as ESPs. Most resource areas do not need the power level to evaluate the impacts on the resource. Therefore, an advanced reactor of any size that meets the performance measures and assumptions in the ANR GEIS can reference the ANR GEIS in an application. The NRC is also considering the implications of relatively new laws and regulations such as FAST-41 (TN6392), EO 13807 (82 FR 40463-TN6393), and CEQ's NEPA regulation updates (85 FR 43304-TN6485).*

The mere existence of compliance with Federal and State environmental permits does not necessarily ensure that adverse environmental impacts are not possible, that impacts can always be found to be small, or that NRC is not required to analyze such impacts. An example is included in footnote 3 to 10 CFR 51.71(d) (TN250), which states that "Compliance with the environmental quality standards and requirements of the Federal Water Pollution Control Act [TN662] (imposed by the U.S. Environmental Protection Agency or the states) is not a substitute for, and does not negate the requirement for NRC to weigh all environmental effects of the proposed action, including the degradation, if any, of water quality, and to consider alternatives to the proposed action that are available for reducing adverse effects." Therefore, the NRC staff will consider compliance with Federal and State environmental permits in addition to other considerations in reaching impact determinations for resources analyzed in the ANR GEIS.

In addition to the ANR GEIS, the NRC is pursuing several other ongoing staff efforts to streamline and clarify requirements associated with future environmental reviews. As part of these efforts, the NRC will consider all applicable laws, policy, and regulations; will incorporate applicable sources of information; and will attempt to identify criteria, best management practices, and measures that could reduce future site-specific environmental impacts.

B.1.6 Supplemental EISs

Comment: One comment stated that multiple potential alternatives should be considered in the ANR GEIS and that the NRC should then determine which alternatives from the ANR GEIS should be discussed in the supplemental EIS. The comment provided the License Renewal GEIS (NUREG-1437) (NRC 2013-TN2654) as an example of such an analysis/approach.

Comment: (9-12)

Response: *The staff was able to address energy alternatives in NUREG-1437 (NRC 2013-TN2654) because that GEIS was written for large light-water reactors (LLWRs) that were being used to generate electricity for the grid. But advanced reactors may be much smaller than the LLWRs and may be used for purposes other than supplying power to the grid. Because of these key differences, the staff cannot reach generic conclusions regarding energy alternatives in the ANR GEIS. However, the staff is developing a white paper that provides comparative information regarding the common energy alternatives, and this paper would be referenced in the ANR GEIS. NRC reviewers will be able to use this information (which will be updated periodically) when considering energy alternatives for supplemental EISs that reference the ANR GEIS. But the determination of the reasonable alternatives for an individual application will depend on the specifics of the project, including the purpose and need. For example, if the proposed action is a demonstration reactor, then none of the typical energy alternatives (e.g., natural gas, solar) would be reasonable alternatives.*

B.1.7 Tribal/Section 106 Consultation

Comment: Some comments requested that the NRC adhere to its responsibilities under the *National Historic Preservation Act (NHPA) (TN4157)* Section 106 consultation process.

Comment: (4-1) (96-1) (96-3)

Response: *As discussed in the Notice of Intent for the ANR GEIS (85 FR 24040-TN6458), the NRC will fulfill its responsibilities under NHPA Section 106 (TN4157) with regard to historic properties as part of the supplemental EIS for each application. Therefore, consultation required by the NHPA will be conducted during the site-specific review for each application and will not be part of the ANR GEIS.*

B.2 Comments Concerning the PPE and the SPE

B.2.1 PPE/SPE Performance-Based Approach

Comment: Some comments requested that the NRC provide a justification for the values presented in the draft PPE and SPE presented at the public scoping meeting on May 28, 2020. Many of these comments generally requested that the NRC reconsider the 30 MWt bounding value in favor of a broader performance-based approach that could allow for larger reactors to benefit from the ANR GEIS analysis. Other comments stated that plant designs exceeding the ANR GEIS plant and site parameter values should be able to use the ANR GEIS analysis under various circumstances.

Comments: (1-2-1) (1-3-2) (1-4-2) (1-9-4) (3-6) (3-7) (7-1) (7-2) (7-3) (7-4) (7-5) (7-6) (9-4) (9-5) (9-6) (9-7) (20-5) (21-2) (21-5) (21-6) (21-9) (21-12) (26-1) (31-2) (37-9) (91-5) (94-3) (94-5) (94-9) (94-10)

Response: *To the extent possible, the ANR GEIS will use a performance-based, technology-neutral approach to bound the generic impact analyses, which would largely decouple the criteria from the power level and focus the analyses on impacts on resources. The staff expects that the use of power level as a PPE criterion would be limited to resources/issues for which power level would need to be an input to the analysis (e.g., severe accident mitigation alternatives cost-benefit analysis). The staff is also considering adjusting the power level threshold value based upon comments received during the scoping process.*

The intent of the ANR GEIS is to identify as many generic issues as possible and to provide generic analyses based on realistic assumptions, thereby streamlining subsequent site-specific project reviews. The NRC staff will develop performance-based parameters, assumptions, and mitigation measures that will maximize the usefulness of the generic impact analyses in the ANR GEIS for supplemental EISs for advanced reactor projects.

If power level is not used as the basis for an analysis for a given issue, then a reactor of any size could rely on the ANR GEIS for that issue, as long as the project meets the relevant performance-based assumptions and parameters used in the generic analysis. For example, the generic analyses for land use and water use would not rely on power level. Land use assumptions might include consistency with applicable zoning and land use plans and the absence of sensitive features such as wetlands and floodplains. Water use assumptions would be based on the amount of water used by the project versus the amount of water available.

B.2.2 Project/Site Identification

Comment: Several comments requested information about specific advanced reactor projects and/or locations of sites being considered for siting of advanced reactor projects.

Comments: (1-1-1) (1-7-1) (1-10-1) (1-10-2) (92-4) (92-6)

Response: *The ANR GEIS will not identify any specific projects or sites but will use a PPE and SPE that will allow the NRC staff to analyze generic impacts of advanced reactors. The proposed site locations for each project would be identified only when an application is received. When an application is submitted, the applicant would need to demonstrate that the proposed reactor and site fall within the relevant PPE and SPE for an issue in order to rely on the ANR GEIS's generic analyses. If the relevant PPE and SPE assumptions are not met for an issue, then the applicant will need to provide information necessary for the staff to complete a site-specific analysis for inclusion in a supplemental EIS tiered from the ANR GEIS.*

B.2.3 Irreversible/Irretrievable Commitment of Resources

Comment: One comment stated that the NRC must address the irreversible and irretrievable commitment of strategic mineral resources that go into these reactors.

Comment: (42-1)

Response: *The NRC will address generic impacts associated with advanced reactor construction and operation in the ANR GEIS, including irreversible and irretrievable commitment of resources.*

B.3 Comments Concerning Hydrology

Comment: One comment requested additional information about the impacts on water use associated with advanced reactor development.

Comment: (15-6)

Response: *The proposed ANR GEIS is being developed for a wide range of proposed reactor technologies using the PPE concept that has been previously applied to NRC ESP EISs. The ANR GEIS will use a reactor technology-neutral PPE approach to bound parameters of advanced reactor designs, including water use. To represent the range of potential sites where an advanced reactor falling within the PPE could be sited, the NRC is developing an SPE that will evaluate the amount of water being used versus a conservative estimation of the amount of water that is available (such as during low-flow periods for surface water resources) at the proposed site or within the region.*

B.4 Comments Concerning Socioeconomics

Comment: Some comments made observations regarding the nature of the socioeconomic impacts of operating reactors such as the beneficial impacts that are typical of nuclear power plants and the number and skill sets required for module removal at the end of the plant life.

Comments: (26-5) (92-8)

Response: *Generic socioeconomic impacts will be discussed in Chapter 4 of the ANR GEIS and socioeconomic thresholds (e.g., workforce, demographics, traffic) will be identified. Subsequent site-specific socioeconomic analyses may be necessary and would be developed for the supplemental EIS once a site has been selected if the site is not bounded by the thresholds analyzed in the ANR GEIS. While the socioeconomic analysis is often the only place in an EIS where beneficial impacts can be determined, some categories of socioeconomic impacts are adverse, including the impacts on traffic and roads, and the crowding of public venues such as hospitals, schools, and recreation areas. The socioeconomic section in the ANR GEIS will also discuss the number of workers needed for the life of the plant and worker skill sets. All socioeconomic categories will be subjected to this socioeconomic threshold analysis to determine whether a future proposed project is at or below the socioeconomic threshold value in the ANR GEIS.*

B.5 Comments Concerning Environmental Justice

Comment: Several commenters expressed concern about the site-specific nature of environmental justice impacts expected from advanced reactor development.

Comments: (5-8) (35-5) (39-7) (40-6) (91-4)

Response: *The NRC considers environmental justice issues in all licensing and regulatory actions per the Commission's "Policy Statement on the Treatment of Environmental Justice Matters in NRC Regulatory and Licensing Actions" (69 FR 52040-TN1009), which states "The Commission is committed to the general goals set forth in EO 12898 [59 FR 7629-TN1450], and strives to meet those goals as part of its NEPA review process." Potential environmental justice impacts will be discussed in the ANR GEIS. However, because potential environmental justice communities cannot be identified prior to identifying a reactor site location, the NRC expects that this resource will likely be one that will need to be further addressed by an applicant in their application and by the staff in a supplemental EIS. As with socioeconomics, the staff will establish demographic threshold values for minority and low-income populations, above which a full analysis would need to be performed in the supplemental EIS for that application.*

B.6 Comments Concerning Historic and Cultural Resources

Comment: One commenter raised concerns regarding the inclusion of American Indian Tribal cultural resource concerns related to sacred and traditional land uses in the assumptions developed for the SPE, which would encourage applicants to engage Tribes early in the planning and siting process. The comment also recognizes that impacts on historic and cultural resources will be assessed through NHPA and NEPA review in site-specific supplements to the ANR GEIS.

Comment: (91-6)

Response: *The NRC considers American Indian Tribal cultural resource concerns related to sacred and traditional land uses in all licensing and regulatory actions per the Commission's Tribal Policy Statement (82 FR 2402-TN5500), primarily by conducting site-specific environmental reviews and fulfilling its NHPA (TN4157) responsibilities for these actions. The NRC staff will include consideration of historic and cultural resources in the development of the ANR GEIS. However, because potential historic and cultural resources cannot be identified prior to identifying a reactor site location, the impacts on such resources would likely be a site-specific issue and would be analyzed in the supplemental EIS. The NRC staff also recognizes the importance of early engagement with American Indian Tribes per Section 106 of the NHPA. The NRC staff will engage/consult with potentially affected American Indian Tribes during the development of site-specific supplements to the ANR GEIS. NRC Regulatory Guide 4.2, Revision 3 (NRC 2018-TN6006) encourages license applicants to engage with American Indian Tribes as they develop their applications. In addition, the NRC endorsed the Nuclear Energy Institute (NEI) Industry Guideline for Effective Pre-application Interactions with Agencies Other than NRC During the Early Site Permit (NEI 10-7 Revision 1) (NEI 2013-TN2672), which encourages early interactions with Tribes by license applicants.*

B.7 Comments Concerning Meteorology and Air Quality

Comment: One comment notes the benefit advanced reactors would provide in the reduction of greenhouse gases that contribute to climate change. The other comment notes that advanced reactors cannot be deployed in time to reduce climate change impacts.

Comments: (5-9) (26-6)

Response: *The GEIS will include a discussion regarding the emissions of greenhouse gases from proposed advanced reactors that could contribute to climate change. The one comment that refers to the potential benefits of avoiding greenhouse gas emissions in addressing climate change and that those benefits would not be realized due to the length of time needed to license and build advanced reactors is outside the scope of the ANR GEIS. Decisions regarding the length of time for deployment of advanced reactor designs are outside of NRC's purview.*

B.8 Comments Concerning Radiological Health

Comment: One comment asked about the communication infrastructure that would be required to monitor health during normal operations.

Comment: (92-2)

Response: *Communication infrastructure is not within the scope of the ANR GEIS. Licensees will be required to meet the regulations for radiological dose to the public and for monitoring and reporting annual results. A discussion regarding radiological health impacts from proposed advanced reactors will be presented in Chapter 4 of the ANR GEIS and the staff will determine if the impacts can be addressed generically or would require a site-specific analysis in a supplemental EIS..*

B.9 Comments Concerning Accidents

Comment: The NRC received comments both supporting and refuting the assertion that small-scale reactors would be able to cause significant off-site radioactive releases. One comment stated that, due to the potential of deployment of multiple advanced reactor modules, if one module has to shut down due to an accident, then all modules would likely be affected as well.

Comments: (15-7) (5-4) (35-3) (39-4) (40-3)

Response: *Any advanced reactor design must demonstrate that it can be constructed and operated in a manner that adequately protects human health and safety and meets the NRC's safety regulations in 10 CFR Part 50 (TN249) and Part 52 (TN251), which would include assessing the safety of multiple modules if they are present. The environmental impacts of postulated accidents will be discussed in Chapter 4 of the ANR GEIS and the staff will determine if the impacts can be addressed generically or would require a site-specific analysis in a supplemental EIS.*

B.10 Comments Concerning the Uranium Fuel Cycle

B.10.1 Fuel Cycle Impacts

Comment: Several comments asked whether advanced reactor fuel cycle impacts would be included in the ANR GEIS and what advanced fuel types and sources would be included.

Comments: (1-4-4) (1-5-1) (1-9-6) (90-10)

Response: *The NRC staff will discuss potential advanced nuclear fuel cycles in Chapter 4 of the ANR GEIS. The staff will address fuel cycle impacts and will determine if the impacts can be addressed generically or would require a site-specific analysis in a supplemental EIS.*

B.10.2 Spent Nuclear Fuel and Waste Disposal

Comment: Several comments express concerns about the plan for handling, transportation, and storage of radioactive waste and spent nuclear fuel from advanced reactors.

Comments: (1-5-2) (5-7) (48-4) (50-2) (51-1) (54-1) (60-2) (64-1) (73-1) (90-9) (91-1)

Response: *The NRC staff will discuss the storage, transportation, and disposal of nuclear fuels and wastes in Chapter 4 of the ANR GEIS in the Fuel Cycle and Waste Management sections and the staff will determine if the impacts can be addressed generically or would require a site-specific analysis in a supplemental EIS.*

B.10.3 Recycling Spent Nuclear Fuel

Comment: One comment expressed the advantages of recycling spent nuclear fuel.

Comment: (94-8)

Response: *The potential for environmental impacts from recycling, or reprocessing, of uranium and plutonium from spent nuclear fuel was assessed in WASH-1248 (AEC 1974-TN23) for Table S-3 of 10 CFR 51.51 (TN250) and in Supplement 1 to WASH-1248 (NRC 1976-TN292). Fuel recycling and reprocessing for advanced nuclear reactors will be discussed in Chapter 4 of the ANR GEIS and the staff will determine if the impacts can be addressed generically or would require a site-specific analysis in a supplemental EIS. While Federal policy no longer prohibits recycling (UPI 1981-TN6476; National Archives 1981-TN6484), there is no current plan to reprocess existing spent nuclear fuel from U.S. nuclear power plants.*

B.11 Comments Concerning Transportation

Comment: One comment stated that transportation of materials associated with the nuclear fuel cycle would increase spills, accidents, and environmental effects.

Comment: (90-11)

Response: *Chapter 4 of the ANR GEIS will evaluate the impacts of the nuclear fuel cycle, including the transportation impacts associated with the nuclear fuel cycle. The NRC will*

determine if these impacts can be addressed generically or would require a site-specific analysis in a supplemental EIS.

B.12 Comments Concerning the Need for Power

Comment: Some comments questioned the need for a project "purpose and need" statement in the ANR GEIS given that individual license applicants would be required to assess and describe the purpose and need for their projects in site-specific license applications. Some comments stated that if a purpose and need statement is included in the ANR GEIS, it be defined broadly enough to include project purposes and needs other than power generation.

Comments: (1-6-1) (9-13) (94-7)

Response: *Section 105(c)(6) of the Atomic Energy Act (TN663) states "...the Commission shall also consider, in determining whether the license should be issued or continued, such other factors, including the need for power in the affected area, as the Commission in its judgment deems necessary to protect the public interest." While the staff understands the commenters' concerns, the need for power analysis is a mandated part of the review. However, in its guidance, the staff has sought to mitigate the concerns stated in these comments. For example, ISG-027 (NRC 2014-TN3774) provides several means of demonstrating the need for power, including relying on a public utilities commission decision on the need for power. ISG-027 is applicable to environmental reviews associated with light water SMR designs, but aspects of the guidance can be applied to any advanced reactor.*

Generic determination of the purpose and need for individual advanced reactor projects may not be amenable to the differing uses and functions that are possible with advanced reactor technologies. For a "purpose and need" other than generation of electricity, such as desalinating water, providing process heat, or providing power to a remote community (cogeneration), staff would also conduct a second "needs analysis" for the end product. Each purpose and need would be specific to the project and the analysis of the need would be conducted and discussed in the site-specific license application and in the supplemental EIS.

B.13 Comments Concerning Alternative Energy Sources

Comment: Certain comments requested that the NRC consider realistic energy alternatives (especially when considering the costs of the energy source) to advanced reactors, while other comments recommended that the NRC invoke rulemaking authority to eliminate the requirement to analyze alternatives as a part of NRC's NEPA reviews.

Comments: (5-10) (26-7) (37-18) (37-19) (48-2) (56-3) (68-2) (70-1) (87-1)

Response: *The NRC staff has identified the consideration of energy alternatives as an issue that is dependent on the purpose and need for the project and cannot be evaluated generically in the ANR GEIS but must be addressed in a supplemental EIS. A reasonable alternative is one that meets the purpose and need for the project. The ANR GEIS will provide examples of purpose and need statements and how they can affect the analysis of energy alternatives in the supplemental EIS. When the NRC staff prepares a supplemental EIS for an advanced reactor*

application, it will consider energy alternatives that meet the purpose and need of the project. See footnote 4 to 10 CFR 51.71(f) (TN250), which states, "The consideration of reasonable alternatives to a proposed action involving nuclear power reactors (e.g., alternative energy sources) is intended to assist the NRC in meeting its NEPA obligations and does not preclude any State authority from making separate determinations with respect to these alternatives and in no way preempts, displaces, or affects the authority of States or other Federal agencies to address these issues."

B.14 General Comments in Support of the GEIS

Comment: Several comments expressed support for the development of a GEIS for advanced nuclear reactors. Comments stated that developing an ANR GEIS would improve the efficiency of the environmental review process by avoiding or reducing the duplication of effort in the process and by focusing future environmental reviews on important environmental issues. Comments stated that a more efficient environmental review process would help speed the deployment of advanced reactors, which would improve the environment because advanced reactors are an alternative to energy production that uses fossil fuels.

Comments: (1-3-1) (1-4-1) (1-9-1) (3-2) (3-3) (3-4) (3-8) (9-1) (9-3) (9-9) (10-1) (11-1) (12-1) (13-1) (13-3) (16-1) (17-1) (18-1) (19-1) (20-1) (20-3) (21-1) (22-1) (23-1) (25-1) (26-2) (27-1) (30-1) (30-3) (31-4) (32-1) (33-1) (34-1) (37-1) (37-2) (37-5) (37-6) (37-7) (37-11) (37-12) (37-13) (37-15) (37-21) (37-22) (38-1) (39-1) (39-2) (39-8) (40-1) (40-7) (76-1) (77-1) (78-1) (79-2) (81-1) (87-2) (89-1) (89-3) (92-1) (94-1) (94-4) (94-13) (95-1)

Response: *Based on its exploratory process, as documented in SECY-20-0020 (NRC 2020-TN6493), the NRC staff concluded that developing a GEIS for constructing and operating advanced reactors would improve the efficiency of the environmental review process and, further, would be consistent with the goals of Federal directives on streamlining environmental reviews (e.g., FAST-41 [TN6392]; EO 13807 [82 FR 40463-TN6393]). Staff concluded that environmental issues related to advanced reactors could be identified and categorized in the same manner as was done for license renewal of operating power reactors in 10 CFR Part 51 (TN250), Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions," Subpart A, "National Environmental Policy Act: Regulations Implementing Section 101(2)," Appendix B, "Environmental Effect of Renewing the Operating License of a Nuclear Power Plant."*

Staff concluded that by identifying and categorizing potential issues, the ANR GEIS would enhance consistency across environmental reviews, further improving the overall efficiency of environmental reviews and helping to streamline the review process. Development of an ANR GEIS would avoid duplication of effort, because the staff would incorporate the ANR GEIS findings by reference into site-specific environmental reviews for advanced reactor license applications, as appropriate.

B.15 General Comments in Support of Nuclear Power

Comment: Several comments expressed support for nuclear power. Some stated that nuclear power plants have operated safely in the United States for decades and have provided

communities with significant economic benefits. Others stated that nuclear power is the best source of baseload power generation for reducing the short-term air quality impacts and long-term climate impacts from burning fossil fuels.

Comments: (1-9-5) (12-2) (13-2) (16-2) (17-2) (18-2) (20-2) (23-2) (24-1) (25-2) (28-1) (29-1) (29-2) (30-2) (30-4) (32-2) (34-2) (36-1) (37-3) (37-4) (38-2) (39-3) (39-6) (40-2) (40-5) (75-1) (77-2) (79-1) (80-1) (82-1) (83-1) (84-1) (85-1) (86-1) (89-2)

Response: *These comments offer general support for the generation of nuclear power but do not provide new information for an analysis of environmental impacts.*

B.16 General Comments in Opposition to the ANR GEIS

Comment: Several comments expressed opposition to the NRC's development of an ANR GEIS. Some comments questioned the availability of information about advanced reactor types and the technical basis for preparing the ANR GEIS, while others stated that any EIS for nuclear reactors should be site-specific. Some comments stated that the ANR GEIS would not adequately protect public health and safety and the environment.

Comments: (5-1) (5-11) (6-1) (6-2) (14-1) (14-3) (15-1) (15-2) (15-5) (15-10) (35-1) (35-2) (46-1) (48-5) (50-1) (51-4) (52-1) (56-1) (56-4) (57-1) (58-1) (60-4) (62-1) (63-1) (70-2) (71-1) (90-2) (90-8) (90-12)

Response: *Based on its exploratory process as documented in SECY-20-0020 (NRC 2020-TN6493), the NRC staff concluded that there is sufficient information about advanced reactor technologies to support development of an effective ANR GEIS with a small environmental footprint. The staff considered previous NRC GEIS documents, such as the License Renewal GEIS (NUREG-1437) (NRC 2013-TN2654), and concluded that developing a GEIS for advanced reactors would help in the same way to streamline the environmental review process, consistent with the goals of recent Federal directives such as FAST-41 (TN6392) and EO 13807 (82 FR 40463-TN6393).*

The staff will develop a technology-neutral set of parameters that bound the characteristics of anticipated advanced reactor designs to support useful generic analyses in the ANR GEIS. The proposed strategy will look at individual resource areas and use a performance-based approach to develop criteria that would envelope the greatest number of designs and still allow a generic conclusion for that resource. The staff would develop a site-specific supplemental EIS for any application for a specific reactor tiering off the ANR GEIS. Safety issues related to advanced reactors would be addressed in the site-specific Safety Analysis Reports prepared by NRC staff for individual license applications.

B.17 General Comments in Opposition to Nuclear Power

Comment: Several comments expressed general opposition to nuclear power, especially when compared to alternative energy sources. Stated reasons for opposition included concerns about public health and safety associated with radiation exposure during normal operations and, especially, during accidents; the continued generation of radioactive waste and lack of a long-

term storage or disposal facility; and the high economic cost of developing and decommissioning nuclear reactors.

Comments: (6-3) (14-2) (14-4) (15-3) (15-9) (41-1) (44-1) (44-2) (45-1) (47-1) (48-3) (49-1) (53-1) (56-2) (59-1) (60-1) (60-3) (61-1) (66-1) (67-1) (68-1) (69-1) (72-1) (74-1) (88-1) (90-6)

Response: *These comments express opposition to nuclear power development, but do not provide new information for an analysis of environmental impacts. The staff will discuss potential impacts on human health (both radiological and non-radiological), issues related to waste management (both radiological and non-radiological), potential impacts of both design-basis and severe accidents, and issues related to the transportation of spent nuclear fuel and radioactive waste in the ANR GEIS. However, issues related to economic cost, safety, and emergency preparedness/response are beyond the scope of the ANR GEIS and would be addressed in subsequent site-specific environmental reviews or site-specific Safety Analysis Reports for each license application.*

B.18 Comments Concerning Issues Outside Scope – Emergency Preparedness

Comment: Two comments relate to the emergency planning process for advanced reactors, specifically the size of the emergency planning zone.

Comments: (31-1) (31-3)

Response: *Emergency preparedness is a safety issue that is outside the scope of the NRC staff's environmental review. The NRC will conduct a safety review for each advanced reactor application. As part of the safety review, the NRC staff will determine, after consultation with the U.S. Department of Homeland Security and the Federal Emergency Management Agency, whether the emergency plans submitted by the applicant are acceptable.*

B.19 Comments Concerning Miscellaneous Issues Outside Scope

Comment: Some comments expressed concern about the environmental and health impacts of uranium mining activities on Tribal lands, stated that the U.S. government should fund cleanup of all uranium mines on or near Tribal lands, that the *Radiation Exposure Compensation Act* (TN6486) should apply to all future generations of Tribal members, and that the U.S. Government should update the 1872 Mining Law (TN6487).

Comments: (53-2) (90-1) (90-3) (90-4) (90-5) (96-2)

Response: *The comments discuss historic actions or decisions over which the NRC does not have regulatory authority. The NRC acknowledges the commenters' concern about human health impacts associated with uranium mining and cleanup activities, but these comments are outside the scope of the ANR GEIS.*

B.20 Comments Concerning Issues Outside Scope – NRC Oversight

Comment: Several comments expressed concern about the NRC's commitment to the health and safety of the public in regulating the nuclear industry, while one comment suggested that a GEIS for advanced reactors is a regulatory process improvement.

Comments: (3-1) (43-1) (46-2) (55-1)

Response: *The NRC takes seriously its responsibility under the Atomic Energy Act (TN663) to protect the health and safety of the public. More information about the NRC's roles and responsibilities is available on the NRC's website at <http://www.nrc.gov/what-we-do.html>. While the Atomic Energy Act of 1954 previously defined a role for the Atomic Energy Commission in formulating a national energy policy, the Act, as amended in 1974 by the Energy Reorganization Act (TN4466), created the NRC from the Atomic Energy Commission's regulatory division to regulate the nuclear power industry. The Energy Reorganization Act segregated the Atomic Energy Commission's national policy role in the Energy Research and Development Administration, which later became the U.S. Department of Energy (DOE). The NRC has no role in promoting nuclear power. Rather, the Congress and the President establish the energy policy of the United States, and DOE implements that policy at the direction of the President. The NRC was created by Congress and designed so that it would not report to the same part of the government that was in charge of setting energy policy (any current Administration) (NRC 2019-TN6477).*

B.21 Comments Concerning Issues Outside Scope – Safety

Comment: Several comments expressed concern about the safety features of an advanced reactor.

Comments: (51-2) (51-3) (65-1) (92-3) (92-5) (92-7)

Response: *It is the NRC's responsibility to protect the health and safety of the public when authorizing the civilian use of radioactive material. Because NEPA (TN661) does not include a safety review, the NRC has codified the regulations for preparing an EIS separately from the regulations for reviewing safety issues. The regulations governing the environmental review are set forth in 10 CFR Part 51 (TN250), "Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions," and the regulations covering the safety review are set forth in 10 CFR Part 52 (TN251) "Licenses, Certifications, and Approvals for Nuclear Power Plants" and 10 CFR Part 50 (TN249), "Domestic Licensing of Production and Utilization Facilities."*

C. List of Commenters

The following tables list the commenters and their comments received by the NRC. Table C-1 provides a list of commenters who provided unique comment submissions. Unique commenters are identified by name, affiliation (if stated), the comment correspondence identification (ID) number, and the Agencywide Document Access and Management System (ADAMS) accession number of their comment correspondence. The form letters are included in Table C-1 and the commenter is noted as “Multiple Commenters” in the Commenter column. Table C-1 and Table C-3 list the names of commenters who submitted the form letters and the ADAMS accession number for their correspondence. The commenters who added unique content to the form letter are listed both in Table C-1 and either Table C-2 or Table C-3.
