Hi Tangee,

Following are my questions for today:

The NRC EJ policy is attempting to address the "disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low-income populations." What is the EJ team doing now to protect the health of the Fairview Co community from the effects of uranium that was released into the groundwater? Is the EJ team willing to distribute test results about uranium and other radiological releases in the groundwater around the nuclear facility? Such distribution should not be limited to those with internet access. The current EJ policy does not seem to include emergency preparedness which is a major form of protecting the community in case of a serious radiological release. Would you consider including emergency preparedness in your environmental justice policy?

Thanks,  
Priscilla
