ARLINGTON TX 76011-4511

August 11, 2021

Julie Ster
Radiation Safety Officer
Kleinfelder, Inc.
2882 Prospect Park Dr, Ste 200
Rancho Cordova, CA 95670

SUBJECT: LICENSE AMENDMENT- CORRECTED COPY

Dear Julie Ster:

Please find enclosed corrected copy of Amendment No. 2 to NRC License No. 04-29431-01 removing the use/storage location at Portugues Dam Project, Carr. 10 km 5.5, Ponce, Puerto Rico, 00731, as requested in letter dated April 5, 2021. This is in addition to the use/storage location removed at 2812 Hunter Drive, Blue Springs, Missouri, as also requested in letter dated April 5, 2021. You should review this license carefully and be sure that you understand all conditions. You can contact me at Latischa.Hanson@nrc.gov if you have any questions about this license.

Note the following for **2812 Hunter Drive, Blue Springs, Missouri:**

Your statement documentation to the NRC Form 314 informed the agency that you have been with Kleinfelder for over 16 years acting as a Deputy Corporate Radiation Safety Officer, Corporate Radiation Safety Officer and for most of this time, the NRC Radiation Safety Officer and that during your time with the Company, there has not been a Kleinfelder office or nuclear gauge storage site at the Blue Springs, Missouri location. Based on the documentation submitted and a review of your historical file, the staff concluded that no licensable radioactive material was located at the facility at 2812 Hunter Drive, Blue Springs, Missouri. This facility is suitable for unrestricted use in accordance with 10 CFR 20.1402, "Radiological Criteria for Unrestricted Use." Based on these conclusions, no further remediation or actions with respect to NRC regulated material is required.

Note the following for **Portugues Dam Project, Carr. 10 km 5.5, Ponce, Puerto Rico, 00731:**

The supporting documentation to the agency provided copies of the most recent leak test results. The leak test results demonstrated that there was no evidence of leakage of radioactive material from the sealed sources contained in the devices. Based on the documentation submitted and a review of your historical file, the staff concluded that all licensable radioactive material has been removed from the facility located at Portugues Dam Project, Carr. 10 km 5.5, Ponce, Puerto Rico, 00731. This facility is suitable for unrestricted use in accordance with 10 CFR 20.1402, "Radiological Criteria for Unrestricted Use." Based on these conclusions, no further remediation or actions with respect to NRC regulated material is required.

Environmental assessments for these actions are not required since these actions are categorically excluded under 10 CFR 51.22(c)(20)(ii).

The NRC's Safety Culture Policy Statement became effective in June 2011. While a policy statement is not a regulation, it sets forth the agency's expectations for individuals and organizations to establish and maintain a positive safety culture. You can access the policy statement and supporting material that may benefit your organization on NRC's safety culture Web site at www.nrc.gov/about-nrc/regulatory/enforcement/safety-culture.html. We strongly encourage you to review this material and adapt it to your particular needs in order to develop and maintain a positive safety culture as you engage in NRC-regulated activities.

NRC expects licensees to conduct their programs with meticulous attention to detail and a high standard of compliance. Because of the serious consequences to employees and the public that can result from failure to comply with NRC requirements, you must conduct your radiation safety program according to the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, note that you must:

1. Operate by NRC regulations 10 CFR Part 19, "Notices, Instructions and Reports to Workers: Inspection and Investigations," 10 CFR Part 20, "Standards for Protection Against Radiation," and other applicable regulations.
2. Notify NRC in writing of any change in mailing address.
3. By 10 CFR 30.36(d) and/or license condition, notify NRC, promptly, in writing, and request termination of the license:
 - a. When you decide to terminate all activities involving materials authorized under the license whether at the entire site or any separate building or outdoor area;
 - b. If you decide not to acquire or possess and use authorized material; or
 - c. When no principal activities under the license have been conducted for a period of 24 months.
4. Request and obtain a license amendment before you:
 - a. Change Radiation Safety Officers;
 - b. Order byproduct material in excess of the amount, radionuclide or form authorized on the license;
 - c. Add or change the areas or address(es) of use identified in the license application or on the license; or
 - d. Change the name or ownership of your organization.
5. Submit a complete renewal application or termination request at least 30 days before the expiration date on your license. You will receive a reminder notice approximately 90 days before the expiration date. Possession of radioactive material after your license expires is a violation of NRC regulations.

In addition, please note that NRC Form 313 requires the applicant, by signature, to verify that the applicant understands that all statements contained in the application are true and correct to the best of the applicant's knowledge. The signatory for the application should be the licensee or certifying official rather than a consultant. Since the NRC also accepts a letter requesting amendment of an NRC license, the signatory for such a request should also be the licensee or certifying official rather than a consultant.

NRC will periodically inspect your radiation safety program. Failure to conduct your program according to NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC may result in enforcement action against you. This could include issuance of a notice of violation; imposition of a civil penalty; or an order suspending, modifying, or revoking your license as specified in the NRC Enforcement Policy. The NRC Enforcement Policy is available at: www.nrc.gov/about-nrc/regulatory/enforcement/enforce-pol.html.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be available electronically for public inspection in the NRC Public Document Room or from the NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at www.nrc.gov/reading-rm/adams.html.

Thank you for your cooperation.

Sincerely,
**Latischa M.
Hanson**
