NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

August 31, 2021

MEMORANDUM TO: Michael Orenak, Chief
Advanced Reactor Technical Branch 1
Division of Advanced Reactors and Non-Power
Production and Utilization Facilities
Office of Nuclear Reactor Regulation

FROM: Jason Schaperow, Senior Reactor Systems E *Jason Schaperow* Signed by Schaperow, Jason
Advanced Reactor Technical Branch 1 on 08/31/21
Division of Advanced Reactors and Non-Power
Production and Utilization Facilities
Office of Nuclear Reactor Regulation

SUBJECT: SUMMARY OF JULY 20, 2021, PUBLIC WORKSHOP ON
SCALE/MELCOR SOURCE TERM DEMONSTRATION
PROJECT – HIGH-TEMPERATURE GAS-COOLED REACTOR

On July 20, 2021, the U.S. Nuclear Regulatory Commission (NRC) staff conducted a public workshop on the SCALE/MELCOR non-LWR source term demonstration project. The project is part of the agency's efforts to prepare for safety reviews of non-LWR license applications. The project objectives are as follows:

- Understand severe accident behavior in non-LWRs,
- Provide insights for developing regulatory guidance,
- Develop publicly available input models for representative designs, and
- Facilitate dialogue on the staff's approach for determining source term.

The July 20, 2021, workshop covered the application of SCALE and MELCOR to determining source term for a high-temperature gas-cooled reactor. During the workshop, NRC, Sandia National Laboratories, and Oak Ridge National Laboratory staff presented SCALE and MELCOR modeling methods and results for simulating core fission product inventory and decay heat during normal operation and core heat up and fission product release to the environment during an accident. A total of 140 participants from the NRC, U.S. nuclear industry, international organizations, and other stakeholder organizations (e.g., Union of Concerned Scientists) attended.

The July 20, 2021 workshop was one part of a series of public workshops for the SCALE/MELCOR non-LWR source term demonstration project. Previously, a public workshop for heat-pipe reactors was held on June 29, 2021 and the meeting summary can be found at

Agencywide Documents Access and Management System (ADAMS) at Accession No. ML21202A380. The remaining public workshop in the series will be on molten salt cooled reactors and is planned for September 14, 2021.

The July 20, 2021, workshop notice is available in ADAMS at Accession No. ML21155A217, the workshop presentation is available at ADAMS Accession No. ML21200A179, and a video recording of the workshop is available [here](#). This workshop summary does not include an attendee list, because of the large number of attendees.
