

# 2-Factor One-Time Password Authentication Using Google Authenticator with Box Quick Start Guide

2-Factor Authentication with “One-Time Passwords” is required for External Users to access NRC documents in Box.

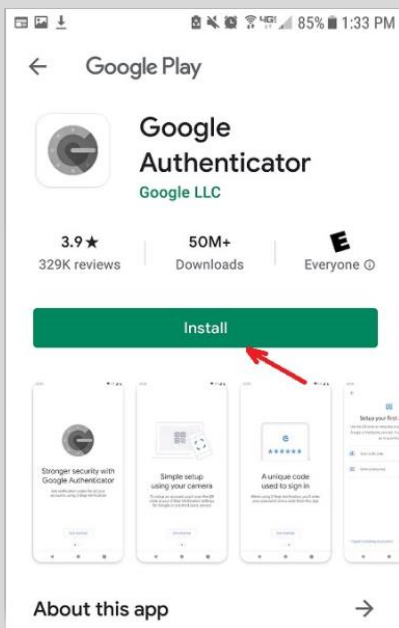

“One-Time Passwords” are generated by the Google Authenticator Application on a mobile device.

The NRC recommends the use of the Google Authenticator Application for accessing NRC documents in Box.

External Users must use a mobile device to download and configure the Google Authenticator Application which will provide one-time passwords for login to the NRC’s Box system.

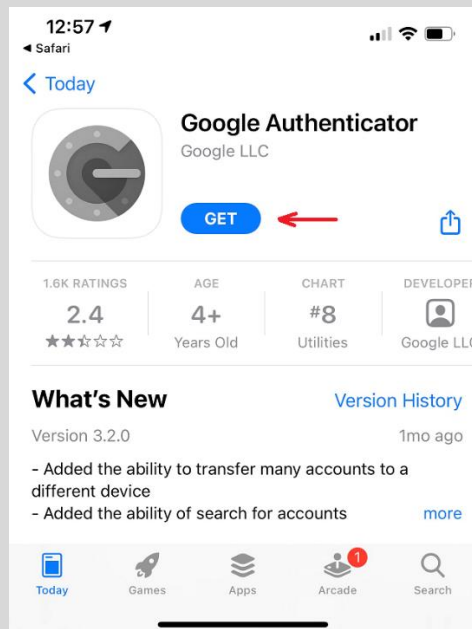

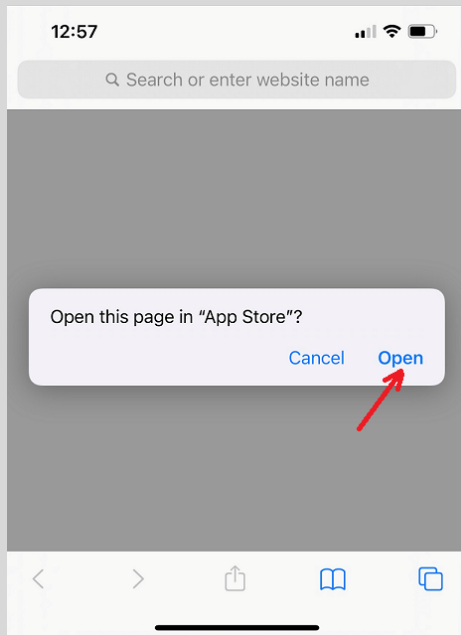

## Install Google Authenticator on an Android Device

- From an Android device, open the following link [Install Google Authenticator for Android](#)
- Select “Install” and follow the prompts to complete the installation

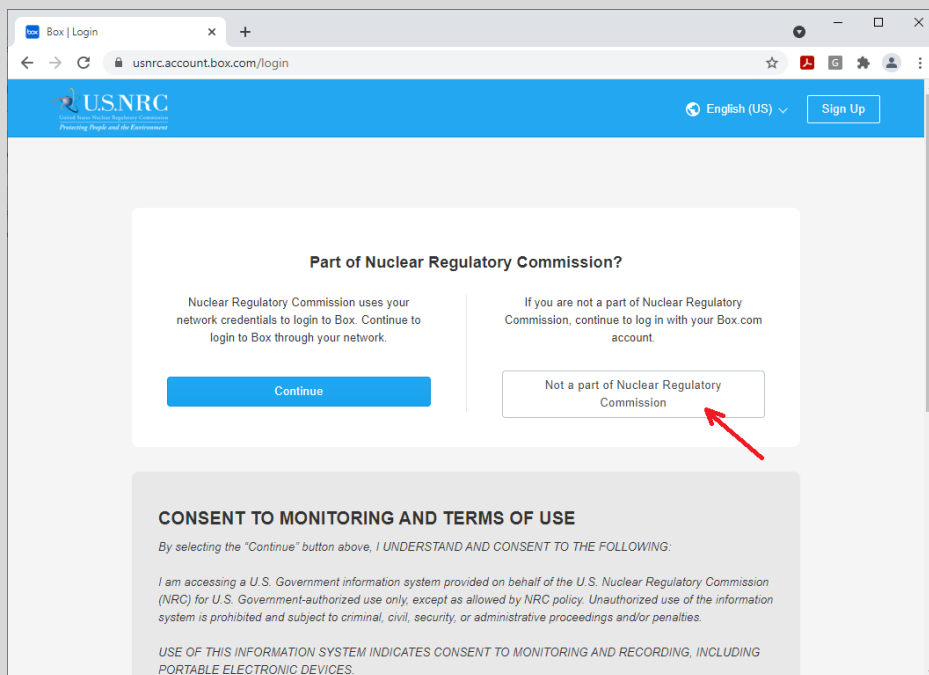

## Install Google Authenticator on an iPhone or iPad Device

- From an iPhone or iPad device, open the following link [Install Google Authenticator for iPhone or iPad](#)
- Select “Open”
- Select “Get” and follow the prompts to complete the installation

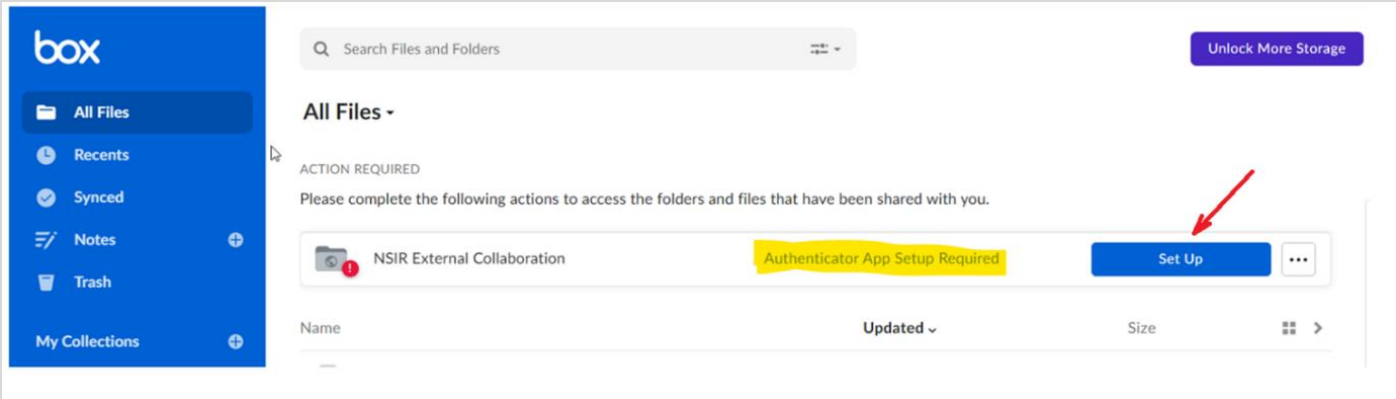

## Configure Google Authenticator

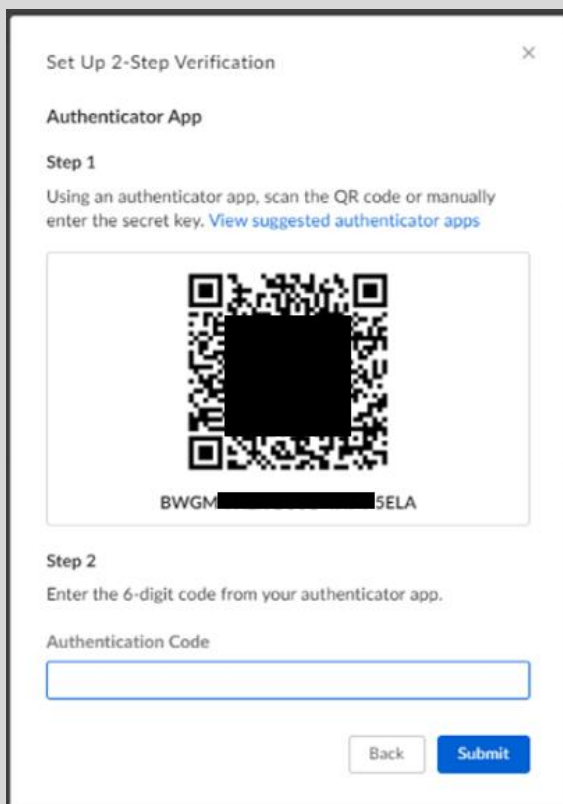

- Using the Chrome Browser on a computer workstation device, navigate to Box at <https://usnrc.box.com>
- Select “Not a part of Nuclear Regulatory Commission” and login to Box

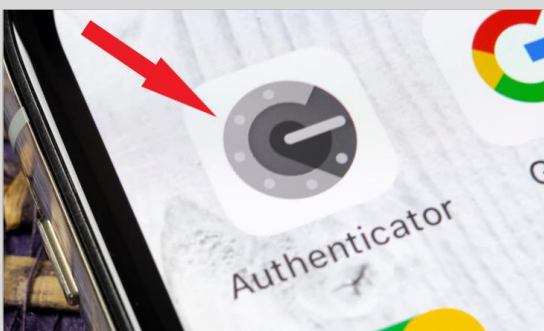

- Navigate to the Folder or Document shared by NRC Staff

- Select "Setup" which displays the following

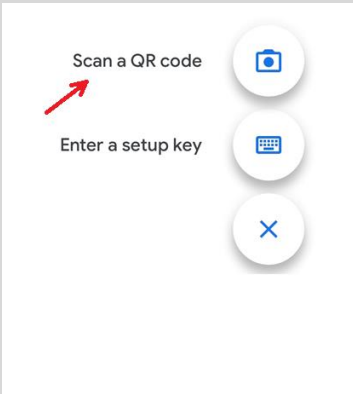

- Open the Google Authenticator application on your mobile device

- If this is the first time using Google Authenticator, select the “Plus” + button in the lower right corner, otherwise proceed to the next step

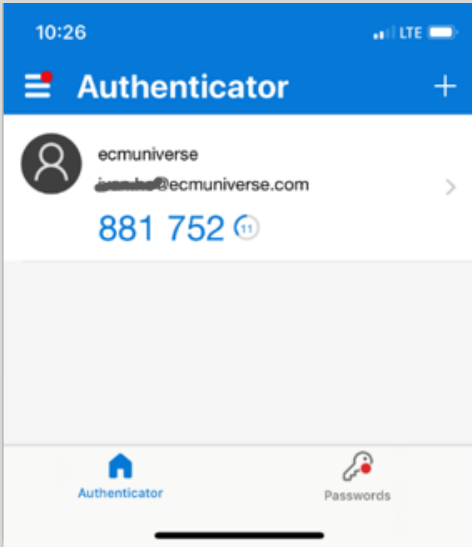

- Select the “Scan a QR code” camera icon

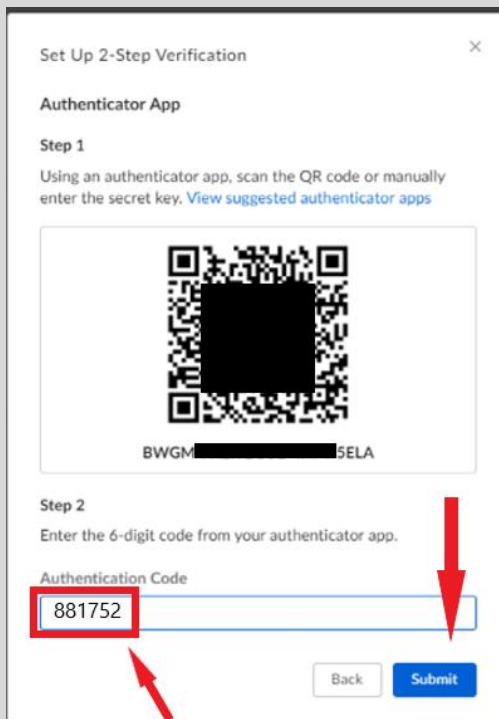

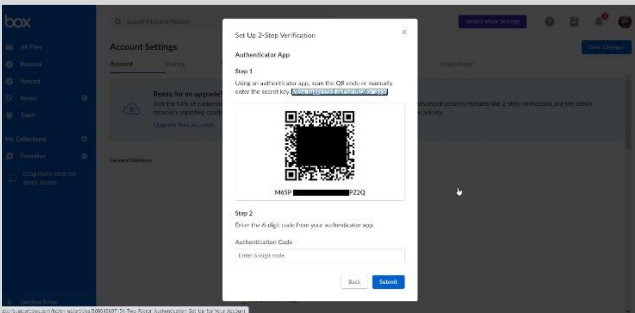

- Point the mobile device’s camera at the barcode displayed in the Chrome Browser so that it appears between the redlines on the mobile device’s display

- A 6-digit one-time password is displayed as follows

- Return to the Chrome Browser on a computer workstation device, enter the 6-digit code and select “Submit”

- The Folder or Document shared by NRC Staff is now accessible in the Chrome Browser
