A cursory review of your documents indicates the use of “short-lived” and “long-lived” when describing radioactive material, including unsealed alpha material. Please provide your definition of these terms. In addition, please describe all alpha “short-lived” unsealed material used at your facilities from 1959-2000, and whether any spills were identified in your historical review of records for this material. Thank you for your assistance,

Penny Lanzisera
