## General Comment

The NRC cannot operate in an environmentally just way without acknowledging its past violations of Environmental Justice (EJ) all along the nuclear chain. Most nuclear reactors, uranium mining-milling-“enrichment” facilities, fuel factories, reprocessing, and both high and “low-level” waste sites and transport routes are targeted for or located in/upstream/upwind of low income, rural or inner-city, communities of color.

A next step is to compensate, cleanup, and repair damage done by previous NRC and AEC licensee actions, including over 15,000 abandoned uranium mines and the 1979 Church Rock disaster directly impacting indigenous people. The White House EJ Advisory Committee's list of “PROJECTS THAT WILL NOT BENEFIT A COMMUNITY” includes “procurement of nuclear power.”

To prevent repeating the past, NRC should set up structures to assist EJ communities including (1) a permanent EJ Advisory Board to assess all NRC processes, with authority to prevent EJ violations and (2) an independent division of NRC, with a firewall from existing staff, to assist intervenors (similar to current staff support for applicants).

The costs could be part of license application/amendment fees. Fees should also cover costs of (3) intervenor funding for legal and technical expertise. Canada has intervenor funding.

NRC's 10CFR2 rules for intervention are clearly skewed in favor of nuclear proposals—they must be amended to enable EJ communities to participate, get standing (presume intervenor status), and for their contentions to be accepted. Local Hispanic intervenors and their contentions were dismissed in the Holtec CIS licensing case. Diversity in NRC-ASLB judges might help.

NRC could improve its EJ policy by going beyond the National Environmental Policy Act requirements. Under NEPA, EJ should be automatically considered in Generic EISs and Environmental Assessments.

EJ “consideration” should include the full revelation of cumulative and synergistic impacts from multiple sources of pollution and health stressors.

Make all information available in the primary languages of the communities and provide longer public comment periods to enable more meaningful participation.

Until the COVID-19 crisis with variants passes, extra measures are needed to enable already-over stressed and disproportionately impacted EJ communities to engage.

Finally but importantly, NRC must seek to determine EJ impacts of many decades of nuclear waste transport along rails, roads, waterways largely through EJ communities from reactors to waste sites. The containers hold more plutonium than the Nagasaki bomb and more cesium than Chernobyl releases and routinely emit radiation even without accidents. There will be accidents and front-line communities will bear the deadly burden without free, prior, informed consent or knowledge.

This, like numerous other issues (climate change, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.
