## General Comment

The NRC should not issue a 40 year license as requested by Westinghouse, but should instead choose a shorter license term given Westinghouse's history of violations and aging infrastructure. I believe 10 years would be a reasonable term.

To Whom it may concern,

I have grave concerns about the eventual migration of pollutants towards nearby surface waters and eventually the Congaree River. There should be additional groundwater and surface water sampling conducted. Clean water is essential for healthy living things, including humans. As a frequent visitor of the Congaree River and Congaree National Park I am passionate that they be preserved for future generations.

The EIS should more thoroughly consider the potential impacts of climate change, specifically increased extreme weather events like flooding, and how that could result in additional spills and releases of pollutants into the environment.

Thank you for adding my comments to the public record.
