General Comment

I recommend we not develop any more nuclear projects before we can safely use nuclear fusion for power projects. The GOP who are puppets of the Fossil Fuel industry are destroying the planet with the outdated oil and gas dirty fuels, now they want us to believe them saying nuclear is a safe power source. Look at Chernobyl, three mile Island and all the other places we can't visit for tens of thousands of years.

No, pass the New Green Deal and keep the GOP from positions of power and leadership, until we make this world a safe and peaceful planet, free of polluters
