General Comment

From today forward include environmental justice in all licensing and regulating of uranium mining, milling, enrichment, fuel fabrication, transportation, nuclear power reactors, nuclear waste, and more. Further, The NRC cannot operate in an environmentally just way without acknowledging its past violations of environmental justice all along the nuclear chain. Most nuclear reactors, uranium mining-milling-“enrichment” facilities, fuel factories, reprocessing, high and “low-level” waste sites, and transport routes are targeted for or located in, upstream of, or upwind of Indigenous, Black, People of Color, poor, and/or rural communities. This has not happened by accident—it is by design.

Past and ongoing harms must be remediated and never repeated. Survivors must be compensated. We must prevent any further actions by the NRC that violate environmental justice principles and human rights.
