## General Comment

The NRC cannot operate in an environmentally just way without acknowledging its past violations of Environmental Justice (EJ) all along the nuclear chain. Most nuclear reactors, uranium mining-milling-“enrichment” facilities, fuel factories, reprocessing, and both high and “low-level” waste sites and transport routes are targeted for or located in/upstream/upwind of Indigenous, Black, People of Color, poor, and/or rural communities.

A next step is to compensate, cleanup, and repair damage done by previous NRC and AEC licensee actions, including over 15,000 abandoned uranium mines and the 1979 Church Rock disaster directly impacting indigenous people. The White House EJ Advisory Committee's list of “PROJECTS THAT WILL NOT BENEFIT A COMMUNITY” includes “procurement of nuclear power.”

To prevent repeating the past, NRC should set up structures to assist EJ communities including (1) a permanent EJ Advisory Board to assess all NRC processes, with authority to prevent EJ violations and (2) an independent division of NRC, with a firewall from existing staff, to assist intervenors (similar to current staff support for applicants).

The costs could be part of license application/amendment fees. Fees should also cover costs of (3) intervenor funding for legal and technical expertise. Canada has intervenor funding.

NRC's 10CFR2 rules for intervention are clearly skewed in favor of nuclear proposals—they must be amended to enable EJ communities to participate, get standing (presume intervenor status), and for their contentions to be accepted. Local Hispanic intervenors and their contentions were dismissed in the Holtec CIS licensing case. Diversity in NRC-ASLB judges might help.

NRC could improve its EJ policy by going beyond the National Environmental Policy Act requirements. Under NEPA, EJ should be automatically considered in Generic EISs and Environmental Assessments.

EJ “consideration” should include the full revelation of cumulative and synergistic impacts from multiple sources of pollution and health stressors.

Make all information available in the primary languages of the communities and provide longer public comment periods to enable more meaningful participation.

Until the COVID-19 crisis with variants passes, extra measures are needed to enable already-over stressed and disproportionately impacted EJ communities to engage.

Please evaluate potential differences for indigenous and other EJ communities between whether there is a focus on establishing a Uranium Reserve, or whether the focus should be on establishing a Uranium mine waste disposal cell in a Four Corners state but not on what is currently considered native (such as Navajo / Dineh nation and trust land) land. The owner of the mine waste at Northeast ChurchRock should pay for relocation other than just a mile or two down the road. If the local Red Pond Road community can be seriously relocated and avoid a repeat of an incident such as the 1979 uranium tailings dam disaster, then GE should pay into a major fund not to expand the inherently anti-human / anti-native industry by establishing a Uranium Reserve, but instead establish a uranium waste disposal site somewhere in the Four Corners but not on native land (or near Taos or Albuquerque preferably!

I also object to radwaste routes running through concentrated populations such as in central and then eastern Los Angeles County -- these routes should be evaluated for EJ significance.

Finally but importantly, NRC must seek to determine EJ impacts of many decades of nuclear waste transport along rails, roads, waterways largely through EJ communities from reactors to waste sites. The containers hold more plutonium than the Nagasaki bomb and more cesium than Chernobyl releases and routinely emit radiation even without accidents. There will be accidents and front-line communities will bear the deadly burden without free, prior, informed consent or knowledge.
