**Subject:** Callaway Plant, Unit 1 - LIC-109 Acceptance of Requested Licensing Action - Application to Adopt TSTF-439 and TSTF-505 - EPID L-2021-LLA-0197

Dear Mr. Elwood,

By letter dated October 21, 2021 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML21294A393), supplemented by letter dated November 24, 2021 (ADAMS Accession No. ML21328A182), Union Electric Company dba Ameren Missouri (the licensee), submitted a license amendment request for Callaway Plant, Unit 1. Pursuant to 10 CFR 50.90, "Application for amendment of license or construction permit," Ameren Missouri (Union Electric Company) submitted an application for amendment to Renewed Facility Operating License Number NPF-30 for the Callaway Plant. The requested amendment would revise applicable Technical Specifications to implement risk-informed Completion Times and the Risk-Informed Completion Time (RICT) Program in accordance with the guidance of TSTF-505, Revision 2. In support of the adoption of TSTF-505, TSTF-439, Revision 2, which involves the elimination of second Completion Times currently specified in the Technical Specifications, will also be adopted. In addition, the requested amendment would remove obsolete one-time Completion Times contained in the applicable Technical Specifications.

The purpose of this e-mail is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with Section 50.90 of Title 10 of the *Code of Federal Regulations* (10 CFR), an application for an amendment to a license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

Based on the information provided in your submittal and discussions during the pre-licensing meeting on September 8, 2020 [Meeting Summary dated October 21, 2020 (ADAMS Accession No. ML20280A563)], the NRC staff has estimated that this licensing request will take approximately 2000 hours to complete. The NRC staff expects to complete this review in approximately 12 months, which is November 30, 2022. If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date or significant changes in the forecasted hours, the reasons for the changes, along with the new estimates, will be communicated during the routine interactions with the assigned project manager.

These estimates are based on the NRC staff's initial review of the application and they could change, due to several factors including requests for additional information, unanticipated addition of scope to the review, and review by NRC advisory committees or hearing-related activities. Additional delay may occur if the submittal is provided to the NRC in advance or in parallel with industry program initiatives or pilot applications.

If you have any questions, please contact me.
