SUBJECT: HOPE CREEK GENERATING STATION – CORRECTION LETTER OF AMENDMENT NO. 229 RE: REVISE LOW PRESSURE SAFETY LIMIT TO ADDRESS GENERAL ELECTRIC NUCLEAR ENERGY PART-21 SAFETY COMMUNICATION SC05-03 (EPID L-2020-LLA-0210)

Dear Mr. Carr:

By letter dated August 17, 2021 (Agencywide Documents and Access System (ADAMS) Accession No. ML21181A056), the U.S. Nuclear Regulatory Commission (NRC, the Commission) issued the Amendment No. 229 to Renewed Facility Operating License No. NPF-57 for the Hope Creek Generating Station. The amendment revised Technical Specification 2.1, "SAFETY LIMITS," specifically, Safety Limits 2.1.1, "THERMAL POWER, Low Pressure or Low Flow," and 2.1.2, "THERMAL POWER, High Pressure and High Flow," to reduce the reactor vessel steam dome pressure value to address General Electric Nuclear Energy Title 10 of the *Code of Federal Regulations* (10 CFR) Part 21 Safety Communication SC05-03, "10 CFR [Part] 21 Reportable Condition Notification: Potential to Exceed Low Pressure Technical Specification Safety Limit," dated March 29, 2005, regarding the potential to violate the low pressure safety limit following a pressure regulator failure-open transient.

The NRC staff has identified that due to inadvertent error, the revised License Page 3, Paragraph C (1) was issued with the incorrect maximum power level of 3092 megawatts. The correct maximum power level is 3902 megawatts.

The NRC staff has concluded that the error was introduced during the preparation of the license amendment. The correction does not change any of the conclusions in the safety evaluation associated with the amendment and does not affect the associated notice to the public.

E. Carr
