

DoD Component	Installation Name	City	State	Site Name	NPL (Y/N)	Radiological Contaminant(s)	Phase of Work (e.g., investigation, cleanup)	Brief Description of Planned Work
Army	Dugway Proving Ground	Dugway	UT	Burial Pits (Trenches 5 and 6) (SWMU 11) (DPG-011)	N	Cs-137, Ra-226 Sr-90, Po-210	Investigation (RI)	Activities to determine the nature and extent of the contamination at the site were completed and documented in the <i>Final Implementation of Portions of the Work Plan for Remedial Investigation/Feasibility Study (RI/FS) for Area 2 of Solid Waste Management Unit (SWMU) 11</i> (August 2014) and the <i>Final Report Area 2 SWMU 11 Trenches TR-5 and TR-6</i> (September 2016); together, these documents constitute a complete RI. In fiscal year (FY) 2019, the Army awarded a contract for the execution and completion of the Feasibility Study, Proposed Plan, and the Record of Decision under the CERCLA/DERP process. The Draft <i>Feasibility Study</i> was provided to NRC for review in June 2020; NRC comments were incorporated into the document and NRC concurred with the Feasibility Study on 28 July 2020. The Army provided the <i>Draft Proposed Plan to NRC</i> for review in early FY21. The recommended alternative involves excavation of contaminated soil and debris, disposal of excavated materials at an appropriately permitted offsite disposal facility, and site restoration. On 9 September 2021, the Army provided the Draft Final Record of Decision to the NRC for review and comment; completion of the Record of Decision is anticipated in FY22. The Army will continue to engage with NRC, including projected schedule and progress, per the terms of the DoD/NRC MOU.
Army	Sharpe Army Depot	Sharpe	CA	Burn Pits Grid AC-W5, SBA, S-33/29 (SHAD-014)	Y	Ra-226	Investigation (RI)	The Remedial Investigation/Feasibility Study (RI/FS) was completed in May 2019; the final document was provided to NRC. The Proposed Plan was initiated in FY20 and was expected to be completed in April 2021; however, the Proposed Plan has not yet been finalized due to delays associated with discussions between the Army, USEPA, and the State of California on Applicable and Relevant or Appropriate Requirements (ARARs). The preferred alternative is excavation with offsite disposal of contaminated material; the future land use is industrial. The Decision Document will be completed once the ARARs issue is resolved. The SHAD-041 parcel will not be transferred until the remedial action for this site is complete. The Army will continue to engage with NRC in their "stay informed" role under the terms of the DoD/NRC MOU, to include participation in quarterly meetings with our other regulatory partners.
