## Re: Rio Algom Mining LLC – Ambrosia Lake West Mill License SUA-1473, Docket No. 40-8905 Semiannual Effluent Report – Second Half 2021

Dear Director,

In accordance with license condition #19 of source material license SUA-1473 and the Rio Algom Mining LLC (RAML) *Radiation Protection and Environmental Monitoring Program Manual*, RAML is providing the second half of 2021 Semiannual Effluent Report for its Ambrosia Lake West mill.

In a letter dated December 14, 2016 (ML16344A027), the Nuclear Regulatory Commission (NRC) agreed in part with a RAML request to terminate certain routine environmental monitoring tasks since the site has been mostly reclaimed. As a result, routine monitoring for environmental external dose, sediment, vegetation, and surface soil has been discontinued and data for these media are no longer being reported. Likewise, in a letter dated December 20, 2017 (ML17293A342), the NRC agreed with RAML's proposal to terminate environmental monitoring for radioactive particulates in air. RAML terminated this monitoring on December 31, 2017.

Figure 1 depicts monitoring locations, and <u>Table 1</u> provides the second half of 2021 environmental monitoring results for radon-222 in ambient air.

If you have any questions or need additional information, please do not hesitate to call me at (505) 317-4416.

Respectfully,

Michael Schienman

Michael Schierman Radiation Safety Officer H3 Environmental, LLC

Note: This table follows the format in Table 3 of Regulatory Guide 4.14. Revision 1, consistent with license condition 19 of SUA-1473 and an NRC staff request made during RAML's September 2019 license inspection.

<sup>1</sup> All measurements were collected using a closed, high-sensitivity alpha-track detector.

<sup>2</sup> Error is the measurement uncertainty at a 95% confidence level.

<sup>3</sup> MDC is reported by the manufacturer technical specifications.

<sup>4</sup>% EC is based on effluent concentration limit in <u>10 CFR 20 Appendix B</u> for radon-222 without its decay products (1E-08 µCi ml<sup>-1</sup>).

% EC - percent of effluent concentration

Conc. - concentration

µCi ml1 - microcuries per milliliter

MDC - minimum detectable concentration
