[Email from John S, dtd 3 22 2022 with List for Cimarron .pdf](#)

Hello Everyone-

As indicated in my email, below, on Friday March 11, 2002, John Saxton has provided a list of model variables and other data that could help him revise his analysis.

Please see attached email from John with the list of water levels that would help his calculations. Also, as indicated earlier, we can schedule a follow-up public meeting to discuss the model and data used if it would be useful.

Thanks

Jim

Subject: Slides and raw transcript from today's Public Meeting

Hello everyone-

Attached are the two sets of slides that John presented yesterday, the main slides, and back up slides. Additionally a raw auto generated transcript from Microsoft Teams of today's Public Meeting is also attached. There are many misinterpretations/errors in the raw transcript, but I think that everyone who participated in the meeting will know what was actually said versus the autogenerated transcript. We don't have a requirement for a transcript for these public meetings, so I don't anticipate a need to edit it, but it may help you remember the gist of the conversation during the presentation when you go back through the slides. There was an video recording of the presentation; however, I am not quite sure how to share this outside of the NRC Sharepoint site. However, if there is a perceived need for that, let me know and I will seek technical and legal assistance to share the video recording with you.

It is my understanding that John Saxton will follow-up with a list of model variables and other data that could help him revise his analysis, and if needed we can schedule a follow-up public meeting to discuss the model and data used.

Thanks for your participation in the meeting.

Jim
