April 1, 2022

Allen R. Doan, Pharm.D.  
Radiation Safety Officer  
Hot Shots Nuclear Medicine  
3145 Wright St.  
Marquette, MI 49855

Dear Mr. Doan:

Enclosed is a Corrected Copy to Amendment No. 15 to your U.S. Nuclear Regulatory Commission (NRC) Material License No. 21-32812-01MD in accordance with your request dated December 8, 2021, regarding activities at your licensed facility. As discussed in a telephone conversation, it was determined that we had not added the use of the Germanium-68/Gallium-68 generators as requested in letters dated October 4, 2021 and additional information submitted on January 3, 2022. Please note that the license has been corrected to authorize the use of the Germanium-68/Gallium-68 generators. Additionally, note that your Decommissioning Financial Assurance documents are being reviewed under separate cover. You will be contacted if any additional information is required regarding these documents.

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region III office at (630) 829-9887 so that we can provide appropriate corrections and answers.

You will be periodically inspected by NRC. Failure to conduct your program in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in enforcement action against you. This could include issuance of a notice of violation, or imposition of a civil penalty, or an order suspending, modifying or revoking your license as specified in the General Statement of Policy and Procedure for NRC Enforcement Actions.

In your letter dated December 8, 2021, you described the use of radioactive material at your location of use at 2296 US Hwy. 41 S., Marquette, MI. You also confirmed that all residual licensed material used at that location had been removed - such that any remaining residual radioactivity is within the limits of Title 10 of the *Code of Federal Regulations* (CFR) Part 20, Subpart E.

The enclosure document contains sensitive security-related information.  
When separated from this cover letter this letter is uncontrolled.

A. Doan

- 2 -

Based on the review of information pertaining to the specific uses of radioactive material at this location and in accordance with 10 CFR 30.36 (j), the staff has concluded that residual radioactive material attributable to licensed activities at this location of use does not exceed current NRC criteria. Based on this conclusion no further remediation or actions with respect to NRC regulated material is required. Your facility at 2296 US Hwy. 41 S., Marquette, MI. is suitable for unrestricted use.

Since serious consequences to employees and the public can result from failure to comply with NRC requirements, prompt and vigorous enforcement action will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance which NRC expects of its licensees.

The NRC's Safety Culture Policy Statement became effective in June 2011. While a policy statement and not a regulation, it sets forth the agency's *expectations* for individuals and organizations to establish and maintain a positive safety culture. You can access the policy statement and supporting material that may benefit your organization on NRC's safety culture Web site at <http://www.nrc.gov/about-nrc/regulatory/enforcement/safety-culture.html>.

We strongly encourage you to review this material and adapt it to your particular needs in order to develop and maintain a positive safety culture as you engage in NRC-regulated activities.

NRC's Regulatory Issue Summary (RIS) 2005-31 provides criteria to identify security-related sensitive information and guidance for handling and marking of such documents. This ensures that potentially sensitive information is not made publicly available through ADAMS, the NRC's electronic document system. Pursuant to NRC's RIS 2005-31 and in accordance with 10 Code of Federal Regulations 2.390, the enclosed license document is exempt from public disclosure because its disclosure to unauthorized individuals could present a security vulnerability.

A. Doan
