Subject: NRC LIC-109 Acceptance Review Results for Susquehanna Steam Electric Station, License Amendment Request to Relocate Staff Qualifications (EPID L-2022-LLA-0046)

Shane,

By letter PLA-7883 dated March 31, 2022 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML22090A058), Susquehanna Nuclear, LLC (the licensee) requested a license amendment to Renewed Facility Operating License Nos. NPF-14 and NPF-22 for the Susquehanna Steam Electric Station, Units 1 and 2, respectively, to relocate technical specification unit staff qualification requirements to the licensee's quality assurance program. The U.S. Nuclear Regulatory Commission (NRC) staff performs acceptance reviews of applications to determine if the scope and depth of technical information is sufficient for the staff to complete its technical reviews. The NRC staff also performs an acceptance review to identify whether an application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff concluded that the licensee's submittal provides technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, the NRC staff may identify issues that affect its ability to complete the detailed technical review despite completion of an adequate acceptance review. If the NRC staff needs additional information, it will notify the licensee by separate correspondence.

Based on its initial review of the application, the NRC staff estimates that it will take approximately 130 hours to complete its review of the application and that it will complete its review on or by February 28, 2023. However, the staff's estimates could change because of several factors, such as requests for additional information, unanticipated addition of application scope, NRC advisory committee reviews, parallel reviews of industry program initiatives or pilot applications, or hearing-related activities. If complexities or challenges during the review cause significant changes to the estimated hours or completion date, the staff's licensing project manager will communicate the new estimates and reasons for the changes to the licensee during routine interactions.

If you have any questions, please contact me at (301) 415-0489 or Audrey.Klett@nrc.gov.
