RE: Amendment Request for Materials License
NRC License No. 47-25389-01
Potesta & Associates, Inc.
Charleston, West Virginia

Dear Sir/Madam:

Potesta & Associates, Inc. (POTESTA) is submitting this request for amendment of our current NRC materials license (No. 47-25389-01). This amendment is being requested to increase the maximum number of Troxler Model 3400 gauges which can be possessed at any one time by our license. Our current active license (Amendment No. 4) limits our gauge procession limit to a total of three (3) – Model 3400 gauges at any one time. We currently own, maintain, and frequently operate three (3) Troxler Model 3430 gauges (SS #s 27565, 33675, and 34345). This permit condition limits our ability to rent additional gauges as required during busy seasonal construction periods. The upcoming 2022 construction season requires that we have several additional gauges available for short-term periods to cover a number of active earthwork projects.

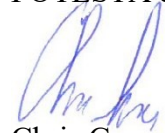

We are requesting a priority and expedited review and consideration of this amendment request as our upcoming summer workload is requiring the use of two to three (2-3) additional gauges which are not currently permitted by our NRC license. We are requesting that our license gauge possession limit be increased to six (6) total (from the current three (3), Troxler 3400 series gauges). Rental arrangements for these additional gauges, when needed, will be made with a gauge provider during periods of high demand. POTESTA does not currently plan to purchase these additional gauges as the current demands will be short-term and seasonal.

Should you have questions, comments, or require additional information, please do not hesitate to contact me. I thank you for your help on this matter. Again we would appreciate a timely review and expedited approval of this amendment request as our current work demands are very pressing.

Sincerely,

POTESTA & ASSOCIATES, INC.
