

## **CURRENT FUNCTIONAL STATEMENTS**

### Division of Construction Oversight

Director: Marissa Bailey

Deputy Director: Omar Lopez Santiago

Responsible for inspection and technical evaluation of all NRC regulated areas associated with new construction of commercial nuclear facilities. Responsible for project management activities for these facilities and oversight of the associated inspection program. Acts as the focal point for coordination with headquarters program offices in the new construction area. Responsible for the development and implementation of inspection programs as a part of the initial test program, the operational programs and the initial startup testing program.

### Construction Inspection Branch 1

Chief: Nicole Coover

Responsible for evaluation and inspection of Vogtle Units 3 and 4 construction. Provides program management, scheduling and coordination, and inspection program oversight for the assigned site. Focal point for coordination with headquarters program offices for the assigned new reactor construction site. Responsible for the conduct of technical inspections at the assigned site including the resident inspector program and routine site activities, e.g., allegations and enforcement. Lead licensee performance reviews of the assigned site. Coordinates and manages allegations for all of the new construction sites. Provides inspection program infrastructure management, inspection tracking and data management, and is responsible for contractor oversight. Provides support for guidance/development for new construction, ITAAC review, and inspection planning. Manages CIPMS auditing.

### Construction Inspection Branch 2

Chief: Bradley Davis

Responsible for the construction at the SHINE Molybdenum-99 production facility and Northwest Medical Isotope facility. Provides program management, scheduling and coordination, inspection implementation, and enforcement and allegation review for these assigned sites. Focal point for coordination with the respective headquarters program offices. Provides the inspection technical expertise and support for the AP-1000 sites and provides input to licensee performance reviews, resource allocation, and inspection planning in the areas of civil/structural, nuclear, mechanical, and electrical engineering. Implements construction inspections, allegation reviews, technical reviews, proposes and supports enforcement actions, and implements the preoperational, digital and startup testing program inspections along with Branch 1.
