General Comment

Please note my concern as a citizen living close to the Seabrook power plant in NH. I can't imagine why oversight and public involvement would be objectionable in any and all of the functions of a nuclear power plant, unless it is financially driven. I believe when we are dealing with such a possible and damaging danger to the public and the environment, that more eyes on the project would only help protect innocent people, animals and natural resources. I am completely against transitioning to Decommission without citizen organizations involvement and complete transparency. Just from a human error standpoint alone, the stakes are too high to prevent those who live in these areas from seeing and having confidence in the process.
