Re: **Rare Element Resources  
Rare Earth Element Separation and Processing Demonstration Project  
Application for Source Material Possession License – Resubmittal in Response to  
Request for Supplemental Information – CONFIDENTIAL Content**

Dear Ms. Bolz,

This submittal accompanies Rare Element Resources, Inc. (RER)'s Resubmittal in Response to Request for Supplemental Information (RSI) for its application for source material possession license for the Rare Earth Element Separation and Processing Demonstration Project.

Attached to this letter is an updated *Technical Report, Appendix C, Detailed Process Description and Diagrams*. Consistent with RER's response to RSI number 5-2 "Provide the location of the waste storage area," Attachment 1 of Appendix C has been updated to indicate the waste storage area more clearly.

RER requests NRC staff withhold the attachment from public disclosure as allowed by Title 10 of the Code of Federal Regulations Part 2.390. The content is proprietary material as described in Paragraph (3) of the May 23, 2022 Affidavit of Randall J. Scott (Agencywide Documents Access and Management System Accession No. ML22144A418).

If you have any questions or need any additional information, please do not hesitate to contact me at 720-278-2460.

Sincerely,

Randy Scott, President & Chief Executive Officer  
Rare Element Resources, Inc.
