Subject: [External_Sender] Salem Generating Station - Incidental Take Report: Kemp's Ridley Sea Turtle 09/13/2022
Attachments: Sea turtle Incidental Take Report 9-13-22.pdf

Attached is the Incidental Take Report for a deceased Kemp's ridley sea turtle collected on 09/13/2022 from the Salem Generating Station during routine raking of the cooling water intake trash bars. The NJ Marine Mammal Stranding Center did not take possession of the specimen for potential necropsy. The specimen has been held for study pending direction from NOAA/NMFS. This incidental take is authorized under Biological Opinion NER-2010-6581.

Thanks, and please let me know if you have any questions or need additional information.

APPENDIX B – Part 1 (Sea Turtle)

Incident Report Sea Turtle Take – PSEG Salem Generating Station

Photographs should be taken and the following information should be collected from all turtles and sturgeon (alive and dead) found in association with Salem. Please submit all turtle necropsy results (including sex and stomach contents) to NMFS upon receipt.

Observer's full name: **Douglas Potts (ECSI)**

Reporter's full name: **Douglas Potts (ECSI)**

Species Identification (Key attached): **Kemp's ridley (*Lepidochelys kempii*)**

Site of Impingement (Unit 1 or 2, CWS or DWS, Bay #, etc.): **Salem Circulating Water Intake 12A**

Date animal observed: **09-13-22**

Time animal observed: **14:00**

Date animal collected: **09-13-22**

Time animal collected: **09:30**

Date rehab facility contacted: **9-13-22** Time rehab facility contacted: **16:00**

Date animal picked up/ delivered to facility: **NA** Time animal picked up/delivered to facility:

Marine Mammal Stranding Center was contacted but no one could be reached at the time, so a follow-up phone call was made at 08:40AM on 9/14/22 and the details of the collection provided to a receptionist.

Environmental conditions at time of observation (i.e., tidal stage, weather):

Salinity: 12.0ppt **Sky condition: clear**

Tide: Flood 1 (91.0ft.) **Air temp. 27.0°C**

Wave height: slight **Wind - NW**

Date and time of last inspection of screen: **09/12/22 @ 10:45 PM**

Water temperature (°C) at site and time of observation: **27.0°C**

Number of pumps operating at time of observation: **10 Circulators in operation**

Average percent of power generating capacity achieved per unit at time of observation: **Unit 1-100.1% / Unit 2-100.1%**

Average percent of power generating capacity achieved per unit over the 48 hours previous to observation: **Unit 1-99.9 % / Unit 2-100.0%**

Sea Turtle Information: *(please designate cm/m or inches)*

Fate of animal (circle one): **dead** alive

Condition of animal *(include comments on injuries, whether the turtle is healthy or emaciated, general behavior while at Salem. During routine inspections, Salem Yard Crew personnel retrieved a deceased Kemp's ridley sea turtle from Salem circulator intake. Salem Unit Control and PSEG Nuclear Environmental Affairs personnel were notified. After contacting PSEG Nuclear Environmental Affairs (NEA) personnel, Environmental Consulting Services Inc. (ECSI) personnel verified species identification and began processing of the specimen. At the direction of PSEG NEA, the deceased specimen was transported back to the ECSI office, and placed in refrigeration, awaiting further direction on final disposition from NMFS.*

Carapace length - Curved: **22.5cm** Straight: **21.6cm**

Carapace width - Curved: **23.5cm** Straight: **20.3cm**

Existing tags? YES **NO** Please record all tag numbers. Tag # _____

Photograph attached: **YES** / NO

APPENDIX B, continued (**Incident Report of Sea Turtle Take**)

Draw wounds, abnormalities, tag locations on diagram and briefly describe below.

Description of animal:

At the time of collection, the specimen was deceased, but no external damage was observed during processing indicating a possible cause of death. Specimen was exhibiting the early stages of decomposition, indicated by a foul odor as well as by distinct swelling of the eyes, neck, and skin on the hind flippers. Based on this evidence, it is likely the specimen perished at some point prior to its observation and subsequent collection at the facility. External tags were not observed, and an internal PIT tag was not indicated.

All information should be sent to the following address:

National Marine Fisheries Service, Northeast Region
Protected Resources Division
Attention: Section 7 Coordinator
55 Great Republic Drive
Gloucester, MA 01930

FAX: (978) 281-9394

**Salem SGS Incidental Take Report - Sea Turtle
Attachment 1**

Dorsal view of a deceased Kemp's ridley sea turtle, collected from Salem CWIS intake on 09-13-2022 by Salem Yard crew personnel. Specimen revealed signs of the onset of early decomposition, indicated by foul odor and swelling of the eyes, neck, and hind flippers (09/13/2022).

A ventral view of the specimen, showing the condition of the plastron. No obvious signs of injury or damage was observed (09/13/2022).

**Incidental Report Sea Turtle Take –Salem
Attachment 1**

A dorsolateral view of specimen, showing the effects of the early stages of decomposition, indicated by swelling of the eyes and neck tissue (09/13/2022).
