General Comment

I recommend not permitting this process using nuclear generation. Florida is an example of a failed state. No further development should be permitted in Florida, and instead a contraction and retreat must happen immediately. The Federal taxpayer is tired of the build back better in hurricane alley and other locales where natural disasters are a common occurrence.

Science in no uncertain terms advises that more frequent and more powerful hurricanes are expected, with greater storm surges, yet politicians are saying they want to rebuild after hurricane Ian, refusing to acknowledge the pending disaster. Allowing nuclear generators in a state with proven and demonstrated incompetent leadership would be stupid.

Let's wait until we can use nuclear fusion safely, before handing a potentially dangerous energy development to corrupt politicians.
