Subject: Acceptance Review - Hatch Supplement to Authorized Relief Request HNP-ISI-RR-05-02 (L-2022-LLL-0018)

Importance: High

Good afternoon Adam,

By letter dated October 27, 2022 (Agencywide Documents and Access Management System (ADAMS) Accession No. ML22300A259), Southern Nuclear Operating Company (SNC, the licensee) submitted a supplement to authorized Relief Request HNP-ISI-RR-05-02 for Edwin I. Hatch Nuclear Plant (HNP), Unit 2. The supplement describes two input errors discovered by Dominion Engineering, Inc. in evaluation report C-3944-00-01 (Enclosure 2 of SNC's relief request [ML18309A272] dated November 5, 2018) and assesses its impact on Relief Request HNP-ISI-RR-05-02 authorized for HNP Unit 2.

The purpose of this e-mail is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this supplement to authorized Relief Request HNP-ISI-RR-05-02. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Pursuant to Sections 50.55a(z)(1) and 50.55a(z)(2) of Title 10 of the *Code of Federal Regulations* (10 CFR), the applicant shall demonstrate that the proposed alternatives would provide an acceptable level of quality and safety, or that compliance with the specified requirements of Section 50.55a would result in hardship or unusual difficulty without a compensating increase in the level of quality or safety.

The NRC staff has reviewed your supplement and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed changes in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

Based on the information provided in your submittal, the NRC staff has estimated that this licensing request will take approximately 70 hours to complete. The NRC staff expects to complete this review on March 05, 2023. If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date or significant changes in the forecasted hours, the reasons for the changes, along with the new estimates, will be communicated during the routine interactions with the assigned project manager.

These estimates are based on the NRC staff's initial review of the application and they could change, due to several factors including requests for additional information, and unanticipated addition of scope to the review. Additional delay may occur if the submittal is provided to the NRC in advance or in parallel with industry program initiatives or pilot applications.

If you have any questions, please contact me.

Best Regards,

Dawnmathews T. Kalathiveettil
