General Comment

RE: Docket ID NRC-2022-0183

Dear NRC:

Don't extend aging Comanche Peak nuclear licenses.

I urge you to reject the application by Vistra to extend the operating licenses for the Comanche Peak nuclear power reactors for an additional 20 years. To protect public health, safety, security, and financial health, the reactors should retire as licensed, on or before 2030 and 2033. Aging reactors become more dangerous due to stress corrosion and embrittlement. Cracks can develop, increasing the risk of radioactive releases. Luminant's customers could see very high utility bills if costly repairs are needed. Solar and wind power could meet the need for electricity more affordably and without creating more deadly radioactive waste.

Reject the license extensions for Comanche Peak, to hold in-person scoping hearings in Texas, to allow a hearing, and to extend the deadline for comments and hearing requests.

Both an afternoon and evening public meeting were scheduled, but then postponed at the last moment, without adequate public notice. Four hours of in-person meeting time were reduced to only two hours online. There is now no evening opportunity to participate for people who work in the day, and not everyone can access online meetings. There will be no exhibits or opportunity to speak directly with NRC staff.

I am concerned about the increased safety and financial risks that would result from allowing another 20 years of Comanche Peak nuclear reactor operation. Risks from stress corrosion cracking, metal fatigue

and embrittlement would all increase, and thereby increase accident risks and the potential for radiation releases. There are 7.76 million residents in nearby Dallas/Ft. Worth. Public health and safety should come first in this decision.

Scoping should consider that there is no need for 20 more years of nuclear power. Renewable solar and wind generation are the most affordable and safest way to meet energy needs. Texas has abundant renewable resources to tap and a grid to move the power as needed.

Seismic concerns of both the reactors and the Squaw Creek Reservoir need to be re-examined in light of recent earthquake activity. Comanche Peak is within the Barnett Shale, a region with extensive fracking and numerous injection wells. There are fault lines in the area and a magnitude 3 earthquake had its epicenter only 20 miles from the site. The reservoir water contains radioactive tritium, and the integrity of the earthen dam must be included in the scoping, including the extent of inspections and past and anticipated impacts to the dam from seismic activity.

Please extend the deadline for intervention and host in-person meetings and hearings.

Thank you.
