Latest Edition of NRC Information Digest Now Available Online

The Nuclear Regulatory Commission has published its 2022-2023 edition of the Information Digest, [NUREG-1350, Volume 34](#), which describes the agency's responsibilities and activities, and provides general information regarding nuclear-related topics. The digest is intended to be a quick reference, with important facts about the agency and the industry it regulates presented publicly in an easy-to-understand format with visual aids.

“The Information Digest is one of the most important publications produced by our agency,” said NRC Chair Christopher T. Hanson. “It’s a comprehensive, plain-language and visually attractive accounting of our work.”

Hanson added that by maintaining the Information Digest online, we make it easy for the public to obtain, read and reference, supporting our commitment to openness and transparency.

The Information Digest includes QR codes that direct users to the most recent information available on the NRC website. The Digest also includes hyperlinks to additional information on major topics. Graphics, figures, maps, and data sets from the NRC are available online.

Starting with this edition, the Digest will begin a two-year publication cycle. The next Information Digest with updated data will be published in February 2025.
