NRC Names New Resident Inspector at Susquehanna Nuclear Power Plant

Nuclear Regulatory Commission officials in King of Prussia, Pennsylvania, have selected Erin Brady as the resident inspector at the Susquehanna nuclear power plant in Salem Township (Luzerne County), Pennsylvania. She joins Senior Resident Inspector Chris Highley at the two-unit site, which is operated by Talen Energy.

“Erin’s experience in private industry, with the Navy and during her time training and in the field as an NRC inspector will serve the agency well as she begins this new role,” said NRC Region I Administrator Ray Lorson. “She stands ready to put what she has learned to use as part of our front-line inspection team.”

Brady joined the NRC in 2021 after working as a quality control and maintenance technician in private industry. Prior to that, she served for eight years as an enlisted nuclear electrician aboard Navy aircraft carriers. Since joining the NRC, she has served as acting resident inspector at the Peach Bottom nuclear power plant in Pennsylvania and completed NRC training qualifications.

She holds bachelor’s degrees in nuclear and electrical engineering from Thomas Edison State University in New Jersey.

Each operating U.S. commercial nuclear power plant has at least two NRC resident inspectors. They serve as the agency’s eyes and ears at the facility, conducting inspections, monitoring safety-significant work projects and interacting with plant workers and the public. Resident inspectors can serve at a reactor site for up to seven years.
