Re: Annual Groundwater Monitoring Report
Dated January 12, 2023
ePermitting Ref: HPQ-MSWX-R1J7V
SRS (Saltstone) Class 3 Landfill
Solid Waste Permit #025500-1603
Aiken County

Dear Mr. Liner:

The referenced document was reviewed regarding the requirements of R.61-107.19, Part V, Subpart E and the Facility's Solid Waste Permit. The following comments are offered:

1. Concentrations of some constituents of concern (CoC), historically present but decreasing, are well below all-time maximums. No additional actions are warranted regarding these CoC.
2. The Department concurs with the proposal to add three analytes discovered during the resampling event: aluminum, manganese, and phenols.
3. All remaining constituents of concern were below applicable groundwater protection standards. Routine monitoring should continue in accordance with the Facility's Permit and the most recently approved groundwater monitoring plan. Please note the annual monitoring report is due on or before **October 15, 2023**.

If you have any questions or need additional information, please feel free to contact me at (803) 898-1310 or abernajd@dhec.sc.gov.

Sincerely,

John D. Abernathy, Environmental Scientist
