SUBJECT				
Coordination of Initial Inspection				
SUMMARY AND ACTION REQUIRED (IF ANY)				
<p>Wilson Blacktop Corp. is a portable gauge licensee based out of Martins Ferry, OH, that received an NRC license on July 8, 2022, to use portable nuclear gauges at temporary job sites in NRC jurisdiction. The RSO, Chad Kociban, returned Jason Draper's phone call requesting information related to the licensee's start of principal activities related to their new license. The RSO told Jason that they had not yet started principal activities because they had not used or stored any gauges in NRC jurisdiction yet. The RSO told Jason that their first use of a gauge in NRC jurisdiction is scheduled for the week of July 24, 2023, at Wheeling Hospital in Wheeling, West Virginia.</p> <p>Because the licensee is not expected to start principal activities within 12 months of receiving its license (July 8, 2023), the due date for the initial inspection will be extended to 18 months (January 8, 2024) in accordance with IMC 2800, Section 05.02.</p>
