Subject: RE: Second RAI 6000-200 Submittal
Date: Tuesday, June 27, 2023 10:31:00 AM

Good morning, Ken,

After reviewing your responses to our 2nd RAI, we have three brief follow-up/clarifying questions, please see them below.

1. When drafting a registration certificate, the NRC will include an estimated useful life. The purpose of question 2 of our RAI dated June 6, 2023, was to obtain an estimate of when servicing or re-evaluation of the Model 6000-200 may be necessary. The 5 to 15 years provided is a broad range. Not taking into consideration estimates for marketing, what is IMS Systems estimated working life for the Model 6000-200.
2. Following up to IMS's response to question three of the second RAI, please discuss any changes made to the source holder to accommodate the newly requested source Model NER-584 or confirm that no changes are necessary.
3. In response to question 4 of our second RAI, you referenced section 14.1.3 Source Holder – Non-Routine. The name of this subsection corresponds to 13.1.3. Please clarify for our understanding.

Please confirm receipt of these questions. The NRC kindly requests your response within 7 days. Please feel free to give me a call if you have any questions.

Sincerely,

Joey Rolland
Mechanical Engineer
U.S. Nuclear Regulatory Commission

Subject: [External_Sender] Second RAI 6000-200 Submittal

Joey,

On behalf of IMS and Engelhardt & Associates, please find our response to the Commissions second RAI dated 6 June 2023.

As discussed on our phone conversation IMS considers all of the information filed as being Confidential.

Feel free to contact us if you have any additional questions.

Have a great weekend.

Thank you,

Ken Wooddell
