OFFICE OF THE  
SECRETARY

Mr. Ronald L. Martinson  
Special Assistant to the Archivist  
(Committee Management) (NX)  
National Archives and Records Service  
Washington, DC 20408

Dear Mr. Martinson:

Enclosed are completed Forms T-820-A for the Nuclear  
Regulatory Commission's Federal Advisory Committees  
for use in preparation of the Annual Report of the  
President for Calendar Year 1982.

Sincerely,

A handwritten signature in cursive script, reading "John C. Hoyle", is written above the typed name.

John C. Hoyle  
Advisory Committee  
Management Officer

Enclosures:

GSA Form T-820-A for the following  
advisory committees:

1. Advisory Committee on Reactor Safeguards
2. Advisory Committee on the Medical Uses  
of Isotopes
3. Advisory Panel for the Decontamination  
of the Three Mile Island, Unit 2
4. Ad Hoc Committee for Review of Nuclear  
Reactor Licensing Reform Proposals
5. Screening Committee for Technical  
Vacancies on the Licensing Board Panel
6. Screening Committee for Lawyer Vacancies  
on the Licensing Board Panel

A. LEGISLATION, REGULATIONS, GUIDELINES OR AGENCY RULES PROPOSED,  
ELIMINATED OR CHANGED AS A RESULT OF COMMITTEE DELIBERATIONS OR  
ADVICE

The Advisory Committee on Reactor Safeguards (ACRS), established in 1957 by statute, accomplishes its purposes by reviewing and reporting on safety studies and facility license applications referred to it; advising the NRC and the Congress on any potential hazards of proposed or existing nuclear power plants, and spent fuel reprocessing and storage facilities and the adequacy of proposed safety standards; and performing such other duties as the Commission or the Congress may request. The Committee conducts an annual review of the NRC Reactor Safety Research Program and reports to the Congress on the status of this program. The ACRS also reviews DOE nuclear facilities when requested by the Department of Energy. The full Committee normally meets once a month for a three-day session to consider projects, generic and special reviews, and criteria and regulatory guides that are ready for full Committee consideration. ACRS subcommittees meet as necessary with the license applicant, NRC Staff, and others to develop information for the Committee on the particular matter under review and to identify those matters warranting particular attention by the full Committee. There were subcommittee meetings in CY 1982, January 1 - December 31, 1982. The Committee's report on applications for facility licenses, and on other matters, becomes a part of the record and are made available to the public except for privileged or security material.

B. SIGNIFICANT SERVICE DELIVERY OR COST REDUCTIONS RESULTING FROM COMMITTEE  
ADVICE

There is a significant need for the ACRS because it provides for an independent review of the potential hazards of proposed and existing U. S. nuclear facilities and of proposed and existing nuclear safety standards and, therefore, provides protection for the public in the uses of nuclear technology and materials.

The frequent meetings of the ACRS provide an opportunity for the public to observe and participate in the regulatory process, and the Committee's reports provide a mechanism to inform the public and the Congress of the findings of an independent group of experts knowledgeable in reactor safety matters.

The compelling need for the Committee is supported by the findings of the Presidential Commission on the TMI-2 Incident (Kemeny Commission) which concluded that the Committee should be retained, and strengthened to continue providing and independent technical check on safety matters.

C. OTHER CONTRIBUTIONS TO THE AGENCY FROM COMMITTEE DELIBERATIONS OR ADVICE

The ACRS reports and recommendations to the Commission have been used

20.

C. Continued

extensively in NRC policy formulation and decision making since establishment of the agency on January 19, 1975. In those cases where a license application is submitted under Section 103 or designated facilities under Section 104 of the Atomic Energy Act, an ACRS report is required by statute. In each such case, the NRC Staff, following the receipt of an ACRS report, prepares a supplemental safety evaluation report which outlines in detail the actions the NRC Staff has or is taking to carry out the ACRS recommendations. These reports are entered into the public docket file for each facility case so they are available for use by parties to NRC licensing proceedings.

On several occasions, substantive restrictions and/or requirements have been imposed by the NRC on nuclear facility operations, including power level limitations, augmented test programs, and added engineered safety features, based on the recommendations of the Committee. Specific attention is given to ACRS recommendations with respect to other generic or selected safety issues and appropriate action is implemented by the NRC Staff. Additionally, ACRS recommendations are implemented in regulations, guides and regulatory policies and practices promulgated by the Commission. For example, proposed NRC regulatory guides developed for power reactors are not published for public comment until the comments of a designated ACRS subcommittee are taken into account. The final guide is not promulgated for use until the ACRS has concurred. Other types of regulatory guides are referred to the Committee on a selective basis by NRC.

The action taken to implement specific ACRS recommendations regarding an individual licensing application is published in an NRC Staff Supplementary Safety Evaluation Report for consideration at the related public licensing hearing. In addition, the status of ACRS recommendations, comments, and questions is monitored on a periodic basis using a detailed report to the ACRS from the NRC Staff relating point by point what Staff action has been taken or is planned on each ACRS recommendation. In addition, frequent status and final reports regarding resolution of ACRS comments and recommendations are given during monthly ACRS meetings and recorded in the minutes of these meetings. In the event the ACRS considers NRC Staff action inadequate with respect to its recommendations, a mechanism is available to bring these matters directly to the attention of the Commissioners.

With regard to the development of proposed regulatory guides and criteria, the ACRS subcommittee and full Committee meetings provide a public forum where the opinion of interested technical groups or individuals and members of the public may be presented.

In the area of reactor safety research, the ACRS annually examines the

20.

C. Continued

thrust and funding of the overall NRC safety research program and conducts in-depth discussions of the effectiveness of the eight major NRC research decision units and subelements. The conclusions of these reviews are reported to the Congress as mandated by Public Law 95-209. These conclusions are considered by Congress in the authorization of the NRC safety research budget. In addition, the Commissioners have requested and the Committee provides a separate report on the NRC's proposed research budget prior to action on the budget by the Commission. The ACRS recently provided testimony to the House Committee on Interior and Insular Affairs Subcommittee on Energy and the Environment regarding the NRC authorization for its FY 1983 Reactor Safety Research Budget and on other budget matters.

In the area of policy formulation, the ACRS often suggests initiation of staff studies and participates in the formulation of technical policy on important safety issues. The Committee's overall knowledge and advice with respect to the resolution of specific safety issues and generic issues is useful to the Commission both in decision making for individual cases and in program planning for the NRC Staff's resources. Additionally, the Committee's continuing review of both industrial and governmental research programs provides the valuable perspective of an independent body of technical experts with respect to the scope and content of the program and the assignment of priorities to individual research efforts.

21. DESCRIBE THE BALANCE OF MEMBERSHIP IN TERMS OF POINTS OF VIEW REPRESENTED AND FUNCTIONS PERFORMED

The Nuclear Regulatory Commission, on the basis of the technical review functions outlined in the statutory mission of the Committee, appoints ACRS members from the scientific and engineering disciplines with three prerequisites in mind: outstanding scientific and technical ability, balanced and mature judgment, and willingness to devote the time required (approximately 130 days each year) to the demanding work involved. The pool of persons so qualified is limited. At the end of June 1982, the Committee included nine members from academic institutions, one employee of a national laboratory, and five members who have retired from active employment with nuclear and non-nuclear backgrounds. There has been a conscious effort to obtain members trained in both nuclear and the non-nuclear disciplines who have had considerable experience in various fields needed to evaluate proposed construction and operation of nuclear power plants and related facilities. This permits and fosters a concentration within the Committee of scientific and engineering proficiency, together with a diversity of viewpoints and perspectives, which provides assurance that adequate independent, open discussion and analysis of the potential hazards of nuclear reactors and the adequacy of safety standards can take place.

21. Continued

During 1981 and 1982, the membership included those experienced in radioactive waste management, chemical processing of spent reactor fuel, electrical engineering, chemical engineering, civil engineering, materials engineering, mechanical engineering, nuclear engineering, reactor operations, heat transfer and fluid flow, reactor physics and probabilistic analysis. Anticipated membership needs include individuals knowledgeable in the areas noted above with increased emphasis on quantitative risk assessment experience.

To provide for public involvement in the nominating process for ACRS members, the NRC issues public announcements soliciting nominees when vacancies arise. In the past, a large number of nominations have been received from the public, including organizations such as public interest groups and technical societies, and we expect this interest to continue when future vacancies are announced. Further, the diversity of viewpoints presently represented by current ACRS members is broadly based from the standpoint of special fields of interest, employment experience and scientific or technical specialty. These membership characteristics provide the Committee with a balance of highly qualified technical experts in the nuclear and non-nuclear fields necessary to carry out the Committee's statutory requirements.

22. DESCRIBE THE FREQUENCY OF MEETINGS AND THE RELEVANCE TO CONTINUING THE COMMITTEE

The ACRS, its subcommittees and working groups held 124 meetings during January through December 31, 1982. The number of meetings held is directly related to the number of reactor projects referred by the Nuclear Regulatory Commission to the Committee for review; the number of generic issues which arose during the year; the number of criteria and guides referred to the Committee for review and comment; the number of DOE and DOD reactor projects referred; and the number of special reviews requested by the NRC and Congress. The full Committee normally meets once a month for a three-day session to consider projects, generic and special reviews, and criteria and regulatory guides that are ready for full Committee considerations. ACRS subcommittees meet as necessary with license applicants, NRC Staff, and others to develop information for the Committee on the particular matters under review and to identify those matters warranting particular attention by the full Committee. If the Committee is to continue to meet the requirements of the statute which established it, and the later additions and amendments, it will need to continue to meet at a similar frequency in the future.

23. EXPLAIN WHY THE ADVICE OR INFORMATION CANNOT BE OBTAINED FROM OTHER SOURCES

As established by the Atomic Energy Act of 1954, the Advisory Committee

23. Continued

on Reactor Safeguards is an independent organization which is mandated to perform certain specific functions and provide advice to the Nuclear Regulatory Commission with regard to the potential hazards of proposed or existing nuclear facilities and the adequacy of proposed reactor standards. The Committee is unique in that there exists no comparable body composed of acknowledged experts in the field of nuclear reactor safety whose Congressional mandate is to provide the Commission with independent advice in this area.<sup>1/</sup> The Commission necessarily has its own expert staff on whom it relies in the day-to-day regulation of nuclear power facilities. However, there is no other advisory committee, either within the Commission or in other agencies, with the current, broadly based knowledge of the ACRS which could be called upon for independent assessments of reactor safety issues.

In addition, since ACRS members are primarily part-time advisors with other full-time interests and activities in related fields, they bring to bear in an organized manner a breadth of experience and current technical knowledge which would be difficult to duplicate with full-time government employees.

A continuing committee such as the ACRS also remains current with respect to nuclear safety issues, including related reactor operating experience and safety research, and provides a collegial judgment regarding these issues that would be impossible to duplicate by use of individual, part-time consultants on a case-by-case basis.

Through the ACRS, the public and the Congress are provided assurance that an independent technical review and evaluation of nuclear reactor projects and safety issues is accomplished and an opportunity for public input during ACRS meetings is assured.

24. EXPLAIN ANY DUPLICATION OF EFFORT WITH OTHER COMMITTEES, WITHIN THE AGENCY, OR WITH OTHER AGENCIES

As noted above, ACRS efforts are not duplicated by other committees or agencies within the government. However, due to the independent nature of the Committee's statutory responsibilities, the ACRS review and that of its consultants does duplicate, to some degree, as intended by law, some aspects of the NRC Staff's review of applications for nuclear power facility licenses and of the monitoring of operating reactors. In this regard, the ACRS effort provides an independent check of NRC regulatory activities which is largely directed at new and improved reactor safety features, an exploration of the basis for NRC Staff decisions as they relate to reactor safety, and assurance that all factors that could endanger the public health and safety have been adequately considered in making licensing decisions.

<sup>1/</sup> The Kemeny Commission recommended that the Committee members continue as part-time appointees and stated their belief that the independence and high quality of the members might be compromised by making them full-time Federal employees.

SECTION C — (Complete this section for ALL committees established or reestablished since 6-30-82.  
For committees previously reported, update information in Item 20 only.)

20. STATEMENT OF ACCOMPLISHMENTS OF COMMITTEE

A. LEGISLATION, REGULATIONS, GUIDELINES OR AGENCY RULES PROPOSED, ELIMINATED OR CHANGED AS A RESULT OF COMMITTEE DELIBERATIONS OR ADVICE

B. SIGNIFICANT SERVICE DELIVERY OR COST REDUCTIONS RESULTING FROM COMMITTEE ADVICE

C. OTHER CONTRIBUTIONS TO THE AGENCY FROM COMMITTEE DELIBERATIONS OR ADVICE

The Panel has been successfully informing the Commission of public views on key aspects of the TMI-2 cleanup. It acts as a forum for participation by local citizens and has been presenting well informed recommendations which have been acted on favorably by the Commission.

21. DESCRIBE THE BALANCE OF MEMBERSHIP IN TERMS OF POINTS OF VIEW REPRESENTED AND FUNCTIONS PERFORMED

The Panel was specifically established to represent a spectrum of opinion. Three members are local government officials, four members are citizens residing in the area around Three Mile Island, four members are well respected scientists or engineers and one member is a Commonwealth of Pennsylvania official.

22. DESCRIBE THE FREQUENCY OF MEETINGS AND THE RELEVANCE TO CONTINUING THE COMMITTEE

Meetings are called by the Chairman only when a significant issue related to the cleanup is identified. Frequency has varied extensively. This is considered a sound approach for assuring effective use of the Panel for important topics throughout the TMI-2 cleanup.

23. EXPLAIN WHY THE ADVICE OR INFORMATION CANNOT BE OBTAINED FROM OTHER SOURCES

Since the Commission is interested in the views and recommendations of knowledgeable persons, particularly from local residents, who have a strong interest in activities at Three Mile Island this Panel is an ideal information source.

24. EXPLAIN ANY DUPLICATION OF EFFORT WITH OTHER COMMITTEES WITHIN THE AGENCY, OR WITH OTHER AGENCIES

No duplication of effort with other committees, within the agency, or with other agencies has been identified.

25. LIST OF MEMBERS

NOTE: List members in Column (A) by the format shown below and indicate the number of meetings attended through 12-31-82 in Column (B). If member's term expired or member resigned, check Column (C). Since members to be listed have been appointed after 6-30-82, check Column D in all cases.
