## General Comment

The threat of nuclear confrontations by enemies both within and outside of America is not a place of comfort these days. Living in Michigan, near the spoils of Uranium rods still buried in containment tanks just feet from the Detroit River. Michigan Political takeovers assigned self-reporting privileges to oversight Agencies, such as EGLE to perform the necessary compliance reporting. Detroit was full of FALLOUT SHELTERS built into its schools, electrical infrastructure (power substations), regular scheduled testing of city wide TAKE COVER SIREN, as to remain ready reminder.

In a nutshell, how can compliance reporting from any Agency of Government is questionable information.
