LISLE, IL 60532-4352

May 7, 2024

Donald J. Conn, M.D.
Radiation Safety Officer
Beaumont Hospital Trenton
5450 Fort St.
Trenton, MI 48183

SUBJECT: AMENDMENT NO. 36 TO RADIOACTIVE MATERIALS LICENSE FOR
BEAUMONT HOSPITAL TRENTON, MATERIALS LICENSE NO. 21-16656-01

Dear Dr. Conn:

Enclosed is Amendment No. 36 to your U.S. Nuclear Regulatory Commission (NRC) Materials License No. 21-16656-01 in accordance with the letters dated March 19, 2024 and May 1, 2024, both signed by Katie Baker, Executive Management.

Your license has been amended to account for the release of your Tc-99m lymphoscintigraphy injection rooms at your licensed facility located at 5400 Fort St., Ste. 170, Trenton, Michigan, as described in the requests.

The requests included a closeout survey report for your Tc-99m lymphoscintigraphy injection rooms. Based on my review of your closeout survey report, I have concluded that all licensable radioactive material has been removed the former areas of use and residual radioactive material attributable to licensed activities does not exceed current U.S. NRC criteria. Therefore, the former areas of use are suitable for release to unrestricted use.

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U.S. NRC Region III office at (630) 829-9887 so that we may provide appropriate corrections and answers.

An environmental assessment for this action is not required because this action is categorically excluded under Title 10 of the *Code of Federal Regulations* (CFR) Section 51.22(c).

You will be periodically inspected by the U.S. NRC. Failure to conduct your program in accordance with U.S. NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with U.S. NRC will result in enforcement action against you. This could include issuance of a notice of violation; or imposition of a civil penalty; or an Order suspending, modifying, or revoking your license as specified in the U.S. NRC Enforcement Policy. Since serious consequences to employees and the public can result from failure to comply with U.S. NRC requirements, prompt and vigorous enforcement action will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance that U.S. NRC expects of its licensees.

The U.S. NRC's Safety Culture Policy Statement became effective in June 2011. While a policy statement and not a regulation, it sets forth the agency's *expectations* for individuals and organizations to establish and maintain a positive safety culture. You can access the policy statement and supporting material that may benefit your organization on U.S. NRC's safety culture website at <https://www.nrc.gov/about-nrc/regulatory/enforcement/safety-culture.html>. I encourage you to review this material and adapt it to your particular needs in order to develop and maintain a positive safety culture as you engage in U.S. NRC-regulated activities.

In accordance with 10 CFR §2.390 of the U.S. NRC's "Rules of Practice and Procedure," a copy of this letter and its enclosure will be available electronically for public inspection in the U.S. NRC Public Document Room or from the U.S. NRC's ADAMS, accessible from the U.S. NRC website at <https://www.nrc.gov/reading-rm/adams.html>.

Sincerely,

Jason M. Kelly, MPH, CPH
Health Physicist
Materials Licensing Branch
