Mr. Caudle:

I have reviewed the request dated April 15, 2024, signed by Terrance E. Wilson, President & CEO, for an amendment to U.S. Nuclear Regulatory Commission (NRC) Materials License No. 13-09788-01 (Franciscan Health - Lafayette East). Upon review, I identified the following areas in which additional or clarifying information is needed:

The requested amendment identifies that license authorization for the Sirtex Wilmington, LLC, Model SIR-Spheres brachytherapy system should be removed. Please confirm that the licensee has appropriately disposed of any yttrium-90 SIR-Spheres in its inventory, including unused patient dosages and/or radioactive waste.

Further, please clarify if the licensee is seeking to release any areas dedicated to the receipt, preparation, storage, and administration of yttrium-90 SIR-Spheres to unrestricted use. If so, please provide a closeout survey to support the removal of those areas to unrestricted use.

Please submit a response, signed by a management representative, by June 27, 2024. To ensure proper routing, please include a reference to your U.S. NRC Materials License No. 13-09788-01, Docket No. 030-01642, and Control No. 640532.

As you will not receive a hardcopy of this request for additional information, please confirm that you have received this e-mail.
