General Comment

I'm surprised that I haven't heard more concern and discussion of the safety of a nuclear power plant being placed in SW Wyoming. Everybody has heard of the catastrophe of a breakdown in a nuclear power plant and most people in Wyoming will be down wind of this power plant. Personally, I'm not convinced yet that any nuclear power plant is totally safe, and they still produce hazardous waste that has to be dealt with. With that said Wyoming has tons of coal and clean burning coal power plants. Makes me wonder why Wyoming is the place to be testing new technology of this sort other then we are the least populated state if something goes wrong. That's a red flag to me.

My biggest question that I would like answered is, why is it being built in SW Wyoming. I'm sure there are tons of dishonest answers available to my question and maybe some of them are partly true but there is one major reason for this being put in Wyoming and I think I know the answer.
