Subject: Diablo Canyon LR Environmental Review: Summary of June 27 Clarification Call Regarding PG&E's Response to RCI AQN-3
Date: Tuesday, July 2, 2024 3:40:00 PM

Hi Trevor,

On June 27, 2024, a brief clarification call was held between representatives of NRC, PG&E, and Enercon to ensure NRC staff's understanding of PG&E's response to information request RCI AQN-3, which was included in the audit summary for the Diablo Canyon license renewal environmental review (ML24106A288). PG&E's response to RCI AQN-3 was submitted on May 16, 2024 (ML24137A314). The conversation was for clarification only. During the call, PG&E acknowledged that, for 2023, the emissions for two engines that are now part of a conditional permit were inadvertently counted twice in its emissions calculations provided during the March 2024 environmental audit. Given that the resulting value is more conservative, there were no additional follow-up questions from NRC staff.

This email will be placed in ADAMS as a record of our conversation. If you have any questions, please let me know.

Thanks,
Kim
