General Comment

I believe the Natrium plat is great for Wyoming in general and Kemmerer specifically. Wyoming needs to move away from coal and coal fired plants, and this will allow our economy to diversify and maintain or increase prosperity.

Kemmerer already has active industries related to power production that are it's lifeblood. Some locals may not want to change, but the world is changing regardless.

Geographically, the area has been proven to be safe for different energy producers that would be susceptible to things like earthquakes. My understanding is that one person at a recent meeting in Kemmerer brought up the fact that we live a few hours from a supervolcano and they were worried about an eruption bring detrimental to the plant. An eruption would be detrimental to the world whether this plant existed or not.

As far as infrastructure is concerned, there is a need to update the water system and roads. There have been limited funds to do so; revenue from increased taxes due to higher home prices could be a possible solution to this funding dilemma. The schools in Wyoming are well funded and funding is based on student enrollment. If the need to expand the schools were to become an issue, the funding to do so would be available.
