## General Comment

I recognize the need for power in the coming years. New devices ask for more and more energy. How will power be produced to meet the demand. I believe a combination of different methods are the answer. Nuclear power is one source of energy. What the public wants is a safe creation of that power.

Palisade Nuclear Power Plant has the distinct opportunity to lead the way for restarting previously closed power plants. Public safety should be your prime directive. Technology has advanced since the original construction of the Palisades plant. Take advantage of those gains and demand not only Palisade, but any future start up bring their facility up to today's code. This give a clear message to all providers of energy what is involved in restarting a closed nuclear power plant. Management need guidelines now is the time to provide those guidelines.

Lake Michigan is a precious resource of fresh water, as well as, recreation for millions. I am just one person, but your commission has been assigned the task of representing my concerns. Safety first for production and storage.

Thank you for your time and consideration

Salvatore Grigoa
