Joseph Messina

Nuclear Methods and Fuel Analysis

---

---

# RAI 9

## Recommended path forward: NRC mini-audit

- Zorita:
  - For transparency, NRC would like MRP-392 to be submitted to the docket so that the NRC can make its safety determination
- Barsebäck:
  - Information on the fluence calculations should be provided; particularly in the code used and its validation
  - Information on the international research program(s) may be helpful
- Conservatism in the data and/or correlations
- Which data is from Zorita in the TR, which is from Barsebäck?
- Ongoing materials harvesting programs that may have improved fluence estimates?

---
