**Subject:** [External\_Sender] "Docket ID NRC-2024-0078, Notice of Intent to Conduct Scoping Process and Prepare Environmental Impact Statement; US SFR Owner, LLC; Kemmerer Power Station Unit 1"

To Whom It Concerns,

The proposed Natrium nuclear power plant to be located near the retiring Naughton coal plant outside of Kemmerer, WY needs more serious consideration. The following needs to be addressed:

- This proposed project is precedent setting for the future of nuclear power in our nation and it warrants careful review.
- I am concerned about the overall lack of transparency on project costs and financial fitness of the applicant, along with many other redactions contained throughout the application. NRC should not waive any regulatory requirements, including any requirements for public disclosure and posting of financial information.
- I do not want nuclear waste stored in Wyoming. The NRC should not license new nuclear power plants until there is a permanent solution to nuclear waste disposal.
- I am concerned about transportation risks associated with the transportation of nuclear fuel, sodium, and other materials to/from the proposed site. Please fully evaluate these impacts within the scope of your review.
- Review and disclose all impacts associated with uranium mining, milling, processing, and the production of HALEU fuel for the proposed power plant.
- Disclose and discuss the total cost to taxpayers of subsidies for the proposed power plant and its fuel. Please identify any impacts to the federal debt as a result of these subsidies.
- Explain the relationship between Rocky Mountain Power and TerraPower and disclose any ratepayer impacts that will result from the project, such as higher utility bills or long-term debt financing.
- Consider a full range of alternatives to the proposed nuclear power plant in your EIS, including much lower-cost and readily available renewable energy options.

Thank you kindly for your due diligence in this matter.

Hannah
