NRC to Hold Open House to Discuss 2024 Performance of Perry Nuclear Power Plant

Nuclear Regulatory Commission staff will discuss the 2024 safety performance of the Perry nuclear power plant during an in-person [open house](#) June 25. The plant, in Perry, Ohio, is operated by Vistra Operations Co.

The open house will be held from 5-6 p.m. Eastern time at the Perry Public Library, 3753 Main St., in Perry. The NRC will discuss its assessment of the plant's 2024 performance. There will be no formal presentation. Staff responsible for plant inspection and oversight, including the resident inspectors based at the site, will be available to speak one-on-one with members of the public about any regulatory or technical questions and concerns.

The NRC determined that Perry operated safely during 2024. All inspection findings and performance indicators were green or very low safety significance. As a result, the plant remains under the NRC's baseline level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, based on the safety significance of the issues involved. Inspection findings or performance indicators with more than a very low safety significance trigger an increase of NRC oversight.

Plant inspections are performed by two NRC resident inspectors and inspection specialists from the agency's Region III Office in Naperville, Illinois.

The [annual assessment letter](#) for Perry is available on the NRC website. Current [performance information](#) is also available on the NRC website and updated on a quarterly basis.
