To whom it may concern,

I am a university student doing research on the NRC licensing process with Dr. Allison Macfarlane. I am looking for records of the dates and types of all RAIs sent and responses received for different commercial nuclear reactor licensing procedures- specifically for the Oklo Aurora reactor and the Kairos Hermes plant application. On the NRC website, I have found records for a few individual RAIs, but not the type of comprehensive list that is available for, for example, the NuScale US600 Standard Design Certification (attached). If similar documents for the Aurora, Hermes, or other commercial plants' application processes are available, please let me know where to find them.

Best,

AnnaJulia Yates
