Subject: Response to request for additional information – Training commitment, material possession and Xofigo therapy notice

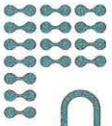

To whom it may concern:

This letter is response to the US NRC request for additional information regarding staff training, radioactive material possession, and notification procedures at Precise Radiation Oncology Center, PSC (PROC).

We confirm that PROC is committed to conducting refresher training for the appropriate personnel prior to the resumption of clinical treatments involving licensed radioactive materials. Additionally, we will provide annual refresher training for all applicable staff. We will maintain written documentation of such training sessions, which will include names and roles of participants, topics covered, qualification of instructors, and assessment of the success of the training. These records will be maintained for a minimum of three (3) years and will be made available to the NRC upon request.

We further confirm that PROC does not currently possess any sealed sources or any byproduct materials.

Moreover, we commit to providing a written notice to the NRC within seven (7) days following the determination that patient treatment involving radioactive materials, such as Xofigo (radium-223 dichloride), will be scheduled.

precise

RADIOTHERAPY

We request an extension to start the decommissioning pursuant to 10 CFR 30.36(f).

To our best knowledge, Precise Radiation Oncology Center is currently the only clinic on the island offering Xofigo therapy.

We hope this response satisfactorily addresses the NRC's request. Please do not hesitate to contact us if additional information or clarification is needed.

Sincerely,

Natalia Santos

Administrative Director

Precise Radiation Oncology Center, PSC
