Reference: Report No. 10CFR21-0140, Rev. 0
From: Dan Roberts

Dear Sir / Madam:

Following this cover is a copy of our report 10CFR21-0140, Rev. 0,
for a 10CFR21 reportable notification for EMD Cylinder Head,
P/N 40121485, with a casting date from May 2023 to August 2025.

A copy of the report will be mailed to the NRC Document Control Desk
and to our affected nuclear customers.

Should you have questions, please let us know.

Sincerely,

ENGINE SYSTEMS, INC.

Dan Roberts
Quality Manager

Report No. 10CFR21-0140

Rev. 0: 01/30/26

**10CFR21 REPORTING OF DEFECTS
AND NON-COMPLIANCE**

COMPONENT: EMD Cylinder Head with a casting date from May 2023 to August 2025
Part Number 40121485

SYSTEM: Emergency Diesel Generator

CONCLUSION: Reportable in Accordance With 10CFR21

Report No. 10CFR21-0140
Revision: 0
Date: 01/30/26
Page: 1 of 2

Pursuant to 10 CFR 21.21(d)(4), ESI is presenting the required information as follows:

(i) Name and address of the individual or individuals informing the Commission.

Dan Roberts	John Kriesel
Quality Manager	Engineering Manager
Engine Systems Inc.	Engine Systems Inc.
175 Freight Rd.	175 Freight Rd.
Rocky Mount, NC 27804	Rocky Mount, NC 27804

(ii) Identification of the basic component supplied within the United States which fails to comply or contains a defect.

EMD cylinder head, P/N 40121485, with a casting date from May 2023 to August 2025.

(iii) Identification of the firm supplying the basic component which fails to comply or contains a defect.

Engine Systems Inc. (ESI)

(iv) Nature of the defect or failure to comply and the safety hazard which is created or could be created by such defect or failure to comply.

Commercial, high duty cycle applications have experienced cracks between the core plugs and injector well on EMD cylinder heads cast from May 2023 to August 2025. The effect is a minor jacket water leak at the top of cylinder head.

If the leakage goes undetected, there is the long term possibility of lube oil dilution that could prevent the engine from fulfilling its safety-related function.

(v) The date on which the information of such defect or failure to comply was obtained.

December 10, 2025

(vi) In the case of a basic component which contains a defect or fails to comply, the number and location of these components in use at, supplied for, being supplied for, or may be supplied for, manufactured, or being manufactured for one or more facilities or activities subject to the regulations in this part.

See Appendix A for a list of affected users. Note the cylinder head is typically supplied within a power pack assembly. The power pack assembly part number ordered by the customer is shown in the table.

(vii) The corrective action which has been, is being, or will be taken; the name of the individual or organization responsible for the action; and the length of time that has been or will be taken to complete the action.

For affected customers:

ESI recommends no near term action. Data obtained from commercial applications indicates these top deck head cracks developed in only the heaviest loaded engines and at an average of 3000 hours. Considering a typical EMD nuclear engine operating time of 50 hours per year, a cylinder head is expected to last 60 years in an emergency standby application before a crack may develop. For the few commercial applications impacted by this issue (<0.5%), cracks were detected during top deck inspections, but the leakage did not negatively affect engine operation. Crack propagation has not been a concern and the issue is localized to the top deck area adjacent to the core plugs. Effect of the crack was nuisance leakage. If left undetected, one symptom of the leak is oil dilution. It is recommended to perform periodic top deck visual inspections of the head and continue performing lube oil analysis.

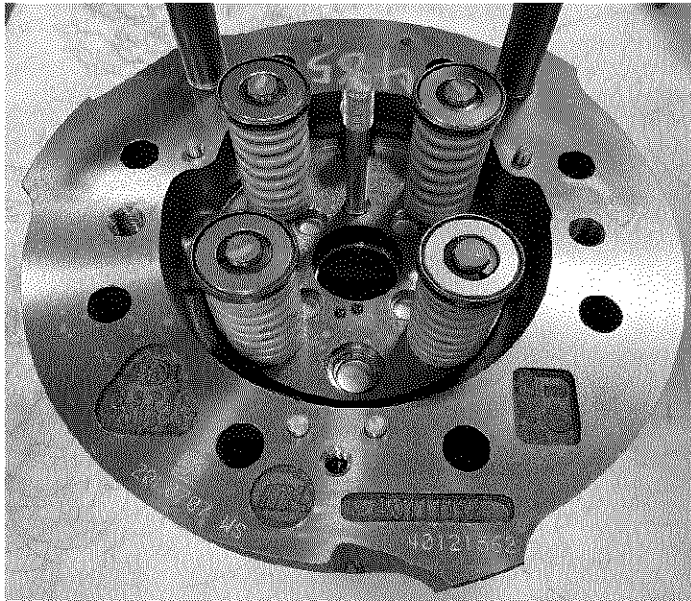

For ESI:

Corrective actions have been implemented by the casting manufacturer effective August 2025. For future shipments, ESI will ensure all cylinder heads have a cast date after August 2025.

Report No. 10CFR21-0140
Revision: 0
Date: 01/30/26
Page: 2 of 2

(viii) Any advice related to the potential defect or failure to comply about the facility, activity, or basic component that has been, is being, or will be given to purchasers or licensees.

Photos 1 and 2 below show a typical cylinder head top view and location of cracks when they have occurred. Cracks have been detected on 51 out of 10,534 heads (<0.5%) supplied for commercial applications. No major engine damage has occurred and there have been no cracks reported in emergency applications. Engine hours required to potentially develop cracks exceed the expected service time of nuclear standby units.
