**Cc:** Yoira Diaz Sanabria  
**Subject:** 51032-2 Review: Application - Accepted

Dear Bryan Flanagan:

By letter dated September 3, 2025 (Agencywide Documents Access and Management System Accession No. ML25246C202), you submitted an application to the U.S. Nuclear Regulatory Commission (NRC) for a revision to the certificate of compliance (CoC) for the 51032-2 transportation package.

The purpose of this e-mail is to provide you the results of the NRC staff's acceptance review of this proposed action request. The staff determined that the application contains sufficient technical information to allow the staff to complete a detailed technical review. The acceptance review is also intended to identify any readily apparent deficiencies related to the characterization of the regulatory requirements or package safety basis.

The NRC staff reviewed your application and concluded that it includes technical information in sufficient detail to enable the staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the more limited scope and depth of the acceptance review compared to the detailed technical review, issues that affect the staff's ability to complete the technical review may still be identified despite the acceptance review being deemed adequate. If additional information is needed, you will be notified by separate correspondence.

The NRC staff determined, based on historical data, that the technical review may require approximately 400 hours and 3 months. The schedule includes the issuance, if needed, of a request for additional information (RAI) by April 2026, and receiving your response by early May 2026. The staff expects to complete its review and issue the CoC by late May 2026. These estimates are based on the staff's initial review of the application and may change due to several factors, including, unanticipated expansion of the review scope, or if the submittal is provided to the NRC in advance of or concurrently with industry program initiatives or pilot applications.

The schedule above is also partly based on you providing RAI responses by the specified date (unless another date is agreed upon), with those responses resolving issues with minimal need for follow-up. It also depends on prompt scheduling and completion of clarification calls, as well as timely submission of any additional supporting non-docketed information.

To adhere to the projected schedule, NRC staff will engage with you on a regular basis to promptly address any emerging issues or challenges that may affect the initial completion date or significantly impact the estimated review hours. Any resulting changes, along with revised estimates, will be communicated through routine interactions with the assigned project manager and appropriately documented. In the event of delays due to other factors, NRC staff will collaborate with you to mitigate the impact and maintain the overall schedule.

Your submittal has been assigned Cost Activity Code (CAC)/Enterprise Project Identification Number (EPID) 001029/L-2025-LLA-0150. Please reference this number and Docket No 71-9252 in any future correspondence associated with this request.

In accordance with Title 10 of the *Code of Federal Regulations*, Section 2.390 of the NRC's "Agency Rules of Practice and Procedure," a copy of this e-mail will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records component of the NRC's ADAMS. ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

If you have any questions, please contact me,

Nishka Devaser, Project Manager
